

Om LaRouches opdagelse. LaRouche's Economics Classes 2018; lektion 1, 23. juni, 2018. Engelsk udskrift

Introduction based on the original scientific discovery made by Lyndon LaRouche during the years 1948–52, refuting the concept of entropy advocated by Norbert Wiener and developing a concept of physical economy based on a study of Heraclitus, Plato, Riemann and Georg Cantor, which he later supplemented through a study of Nicolaus of Cusa. This study led LaRouche to oppose all monetarist theories associated with the British East India Company system of Free trade, globalization and post-industrial society and to embrace the physical economic approach of Gottfried Leibniz (Society and Economy) that later became the American System of Economics of Alexander Hamilton, from his more advanced scientific basis. This class will be given by Will Wertz.
