## Modi forklarer Ban Ki-moon, at fattigdom, ikke CO2udslip, er vigtigst

Den 27. september 2015 — Da Indiens premierminister Narendra Modi d. 25. september diskuterede med FN's generalsekretær Ban Ki-moon under FN's møde om mål for bæredygtighed, bragte han emnet om manglende tillid op. Ifølge talsmanden for Indiens udenrigsministerium Vikas Swarup bruger industrilandene tilsyneladende klimaemnet til at holde udviklingslandenes befolkningers levestandard nede, med påskud om at kontrollere CO2-udslippet, rapporterede Indo-Asian News Service (IANS) i dag.

Modi sagde, at udviklingslandene skal have mulighed for at udvikle sig, og at industrilandenes politik om at indføre restriktioner og kontrol af udviklingen ikke var vejen frem. »Der var brug for positive foranstaltninger, som f.eks. lempelser af finansieringen for projekter relateret til klimaforandringer, samt overførsel af teknologi, for at fremme bæredygtig udvikling, frem for negative foranstaltninger, der fokuserede på at begrænse CO2-udslippet«, sagde han ifølge IANS.

Senere på dagen, da han talte til et særligt FN-topmøde, betonede Modi, at lande som Kina, Indien og Brasilien huser millioner af mennesker, der lever under ekstrem fattigdom (mindre end \$1.25 om dagen) — hhv. 80, 280 og 10 millioner. Det handler ikke kun om at opfylde de fattiges behov og om at opretholde deres værdighed eller tage moralsk ansvar, men at indse, at målet for en bæredygtig fremtid ikke kan opnås, hvis ikke dette fattigdomsproblem bliver adresseret, sagde han ifølge BRICS Post. Næsten 60 % af landbefolkningen i Indien lever i »afsavn« ifølge en måling, der måler syv socialøkonomiske forhold fremlagt i en regeringsundersøgelse

Tema-artikel: Begynd med Franklin Roosevelts helhedsidé. FN for fælles, økonomisk opbygning af verden, ikke Det britiske Imperium

EIR, 22. september 2015 — Verden vil snart forsamles i Manhattan til den sidste uge i september til De Forenede Nationers Generalforsamling. Obama vil tale den 28. september, en måned før 70-års dagen for ratificeringen af FN's Charter i oktober 1945. Verden vil imidlertid ikke længere lytte til Obamas diktat, der fremsættes på vegne af hans herrer i Det britiske Imperium. I stedet vil verden samles, idet et nyt paradigme er i færd med at blive konsolideret, anført af BRIKS-udviklingen, der har et særdeles reelt potentiale for at lancere en Renæssance for hele menneskeheden, stedt over for Det britiske Imperiums smuldrende bygningsværk. Som Lyndon LaRouche for nyligt erklærede, så er den onde Bertrand Russells verdensøkonomiske system dømt til undergang.

# Video: Helga Zepp-LaRouche: Et nyt paradigme for civilisationen (Dansk udskrift)

## Schiller Instituttets formand, Helga Zepp-LaRouche:

»Du ved sandsynligvis ikke noget om det endnu, for massemedierne dækker det ikke, men virkeligheden er den, at menneskeheden allerede har indledt en fuldstændig ny æra med BRIKS-landene. De er i færd med at virkeliggøre et fuldstændigt nyt økonomisk og finansielt system. Kina er i færd med at bygge den Nye Silkevej, der bringer udvikling og fred til alle lande, der deltager i projektet. Kinas kultur er orienteret imod en bedre fremtid for menneskeheden, og hele den kinesiske befolkning deltager optimistisk i denne fællesmission.

Den indiske premierminister Modi har udtrykt det således: 'BRIKS-landene udgør den første alliance i historien, der ikke defineres ud fra sine aktuelle kapaciteter, men ud fra det fremtidige potentiale, og det er dets befolkningers kreativitet.'

Lad os gøre alt, vi kan, for at få de europæiske nationer og USA til at gå med i dette optimistiske perspektiv for fremtiden.«

(Men uanset, hvilken form for trykkemaskine, der bruges, må vore trykkeriarbejdere ...)

**Speaker:** »Den største udvikling i vores levetid er blevet fuldstændigt blokeret af medierne. Er der noget, medierne ikke vil have, du skal vide?«

#### Den kinesiske præsident, Xi Jinping:

»Vi har kun en planet, og landene deler denne ene verden. For at få fremgang i Asien, og i verden, kan vi ikke undvære hinanden. Det, som Kina derfor har mest brug for, er harmoniske og stabile, nationale forhold, og fredelige og rolige, internationale forhold. Uroligheder og krig er imod det kinesiske folks fundamentale interesser. Kina har, i moderne tider, lidt under uroligheder og krig i mere end et århundrede, og det kinesiske folk ville aldrig ønske at påføre andre lande, eller folkeslag, den samme tragedie. Historien har lært os, at intet land, der forsøgte at opnå sit mål ved hjælp at magt, lykkedes med det.«

#### Den russiske præsident, Vladimir Putin:

»Vi går nu ind i en ny fase af vores nationale udvikling. Vi må forstå, at de fremtidige generationers liv og vore udsigter som land og som nation afhænger af os i dag, af vores faste beslutning om at udvikle vore udstrakte vidder fra Det baltiske Hav til Stillehavet.«

#### Den indiske premierminister Narendra Modi:

»Ligesom vi kæmpede for vores frihed, ligesom vi kæmpede sammen; vi var ikke adskilt dengang. Vi var sammen. Vandt vi ikke kampen om frihed imod det imperium? Hvis det indiske folk kunne fjerne så stort et imperium uden at have regeringsmagten, uden våben og endda uden ressourcer, så er det, venner, nutidens nødvendighed at udrydde fattigdom. Kan vi ikke overvinde fattigdommen? Mine kære, 1,25 milliard landsmænd, lad os beslutte at udrydde fattigdommen, vinde kampen imod den. Lad os gå frem med drømmen om at udrydde fattigdom i Indien.«

## Højtplaceret indisk regeringsperson: Infrastruktur er en offentlig statsværdi

Berlin, 20. maj, 2015 - På et panel om Modi-regeringens ambitiøse »100 Smart Cities«-program for Indien, der afholdtes i forbindelse med Den asiatiske Stillehavsuge i Berlin i dag, rapporterede Pradeep Puri fra Indiens Føderale Råd for Handel og Industri (FICCI) om de blandede erfaringer med offentligtprivate partnerskaber og erklærede: »Infrastruktur er en offentlig, statslig værdi, og staten må påtage sig ansvaret.« Måske lige borstet fra i USA, så er dette et princip, der er anerkendt over hele verden, og det kan ikke være anderledes i Indien. Indiens basale infrastrukturbehov er enorme: Puri og andre indiske talere talte om et minimumsbeløb på 1,3 billioner dollar, som må investeres for at gøre indiske byer egnede til at leve i og forhindre dem i at synke ned i slum. Frem til 2050 må der skabes henved 500 millioner nye jobs i Indien, og de fleste vil blive inden for bymæssige områder; 60 af disse 100 byer vil have en befolkning på 1 million mennesker og mere, og seks af dem vil hver have en befolkning på mere end 10 mio. mennesker.

Modis Smart Cities-program skal, som flere indiske talere påpegede, ikke begrænses til 100 byer, men er tænkt som en drivkraft for at få alle landets flere tusinde byer involveret. »Smart« indebærer ikke alene IT og elektronik; det indebærer først og fremmest at tilvejebringe en garanteret og billig forsyning af ferskvand, energi, kloakering og offentlige sundhedstjenester, så vel som også offentlig transport, for hver eneste borger i Indien. Modis program gælder for alle indiske borgere, ikke kun for en rig elite, der ønsker at kopiere vestlig livstil – Indien vil blive en

moderne nation, men vil have sin egen særlige karakter. Og befolkningen støtter Modi, som paneldeltagerne understregede.

En repræsentant fra det tyske Kreditanstalt für Wiederaufbau (KfW) (Kreditanstalt for Genopbygning), som under dette panel af *EIR* blev spurgt om samarbejdet med de nye finansinstitutioner, BRIKS' NDB (Nye Udviklingsbank) og AIIB (Asiatisk Infrastruktur-Investeringsbank), sagde, at han bød disse nye spillere velkommen på det internationale marked, og at KfW helt bestemt ville arbejde sammen med dem, idet AIIB begynder at operere først og NDB lidt senere, efter hans mening. Han tilføjede, at han mener, de nye banker vil konsultere KfW om, hvorledes den udfører sit arbejde, men dernæst vil de naturligvis udføre deres arbejde på deres egen måde.

HELGA ZEPP-LAROUCHE ADDRESSES "CHINA'S 'ONE BELT, ONE ROAD' POLICY' SEMINAR IN COPENHAGEN, April 27, 2015

Here is the transcript of Helga Zepp-LaRouche's address to the Schiller Institute seminar in Copenhagen, which was held Copenhagen Business Confucius Institute, Copenhagen Business School. Click her for the audio and video from Helga Zepp-LaRouche's speech and the other speeches from the seminar.

TOM GILLESBERG: I have the great honor of introducing Helga Zepp-LaRouche, who has come here from a rather busy schedule both

in Germany and the United States, but also the whole world she's

intervening to. Just as a short introduction, Mrs. Zepp-LaRouche

has been since 1977 the wife and very close collaborator of Lyndon LaRouche in the United States, the economist, philosopher,

statesman who is giving leadership in the U.S., for the U.S. to

return to the intentions of its founders, to be a promoter of sovereign nations that can collaborate on an equal footing to secure the benefits for all nations and peoples.

And Helga has a very, I think, close connection to China. As a young journalist she traveled to China in 1971, in the height of the Cultural Revolution as one of the first Western journalists and actually saw on the spot what was going on. She

then became politically active with the LaRouche movement and embarked on a life-long battle for a new just world economic order, for the possibilities of development for all nations and

peoples.

She then founded, among many other things, the Schiller Institute, in 1984. She is presently the chairwoman of the German political party, the BüSo — the Bürgerrechtsbewegung Solidarität, or Civil Rights Soliarity Movement. She was vry active after the Fall of the Berlin Wall and one of the authors

of the Schiller Institute program for the development of the world after the Iron Curtain had fallen of the program the Paris-Berlin-Vienna Productive Triangle, a Locomotive for the World Economy. And when that did not materialize, she was very active in extending that program to the program for the Eurasian

Land-Bridge, going from China and Asia to Europe and having a development of the whole region. And as part of that, she then became a visitor many times to China to speak on the need for a

New Silk Road and actually earned her nickname in China as the "Silk Road Lady," for her efforts to have China embark on this policy.

And since then, she has been also the driving force in holding many scores of conferences in Europe and the United States on the need for creating a paradigm shift, to get the

Western world out of its long-term economic, strategic, and cultural crisis. And, over the last couple of years, she has been one of the architects of this report, "The New Silk Road Becomes the World Land-Bridge." She has also been leading the campaign to stop the present geopolitical games that threaten to

detonate thermonuclear war and instead get the United States and

Europe to accept the offer of the BRICS countries to join forces

in an inclusive world order, where all nations of the world, on

an equal footing, collaborate to secure the peace and development

of all nations.

So I think it's very appropriate that you are here to directly lay what's going on, so please, welcome. [applause]

HELGA ZEPP-LAROUCHE: Thank you, Tom, for these kind words of introduction.

Well I have a certain dilemma, because I want to present to you the potential, which lies in this program, and given the fact

that the Western media have reported very little about it, I have

a dilemma, that I need to tell you, that this is {the} most important political initiative on the planet right now. The dilemma comes from the fact that, by introducing this idea, have

to tell you immediately why this is the case, and that is the reality, that the world is much more close to a new global war,

than most people have an inkling of. And this New Silk Road initiative, which comes from China, but which in the meantime has

been joined by many countries, is the only available war-avoidance policy.

Now there was just on the April 18- 19 in Moscow the Fourth Moscow International Security Conference, and the main subject of

this conference was the danger of nuclear war. And this is a reaction to the fact that NATO has been expanding eastward, up to

the borders of Russia. You have a whole bunch of strategic doctrines which Russia regards as a threat to their security interests, and naturally you have the horrendous situation in Ukraine, which contrary to what the Western media have been reporting on — or not reporting actually — is it's really something which the West must make up. I just participated in the

last two days, or Friday and Saturday in a conference in Baden-Baden in Germany, the German-Russian Cultural Days. It's an

annual conference, and there was a large gathering of German industrialists and Russian speakers and Russian people. And we had the fortune to have a videoconference connected to this conference, which brought in a live program from the former Prime

Minister of Ukraine, Mr. [Mykola] Azarov. And he gave an absolutely hair-raising report about the conditions in Ukraine,

the fact that the country is being torn apart. Political leaders

are either forced to go into exile or are threatened to be assassinated; journalists are being killed openly in the street;

trenches are being built; and, as you know, American soldiers are

now training the National Guard, which has a lot of Nazi components in it. And for the Russians this is extremely severe,

because we are shortly before the 70th anniversary of the end of

Nazism and the end of the Second World War, and the mood of

the

people were really horrified to see this endorsement of Nazis 70

years after the Second World War.

Now, I don't want to go into this in depth, we can do that in the discussion if people have questions about it, but I think

this crisis, in Ukraine in particular, I could also point to the

Middle East, which is in a similar horrible condition, makes very, very clear, that if we as humanity cannot move away from geopolitics — geopolitics was the reason for two world wars in the 20th century, and right now the continuation of geopolitics

is threatening a new global war. I just want to mention an article in {New York Times} from 19th April, where two generals,

Gen. James Cartwright, who is former head of the U.S. Strategic

Command, and Gen. Vladimir Dvorkin, who is the chief of intelligence of the Russian Strategic Nuclear Forces, they penned

together an article, In which they said that the world has never

been so close to the danger of nuclear war globally, and therefore extinction, as right now. And the reason is obviously

that even the normal code of behavior among nations, which existed in the Cold War, that you had a red telephone between Kennedy and Khrushchev, this no longer exists; and you have the

two nuclear forces, from NATO and the West and Russia, all the time on launch on warning. And launch on warning means there are

only a few minutes time, if one side perceives a launch, either

by intention or by accident, they have a few minutes, actually

it's estimated three minutes' time, to respond or be eliminated.

So that shows you how extremely close we are to the danger of a global extinction of civilization. Because if this would happen, we would not exist as humanity. And I'm saying it with that gravity, to say that this calls all the more urgently, for a

different approach. And the different approach must be to move away from geopolitics and move in the direction of the common aims of mankind.

And it just happens to be, that the policies which are proposed by President Xi Jinping, which he calls a "win-win" policy, is exactly that. It's the idea, that with the New Silk Road, you have a policy where every country which participates in

it, will have a benefit for it. The New Silk Road, Maritime Silk

Road policy by China is {not} a new imperial policy replacing the

Anglo-American imperial policy, but it is a completely new model

of the nations among nations, where the enormous example of the

Chinese economic miracle, which China was able to develop in the

last 30 years — you know, where China in {30 years}, developed as much as most industrial nations needed 100 or 200 years to develop — and China is now offering to export that model and have other countries benefit in a similar way from that kind of

economic miracle, which China did.

Can you move to the first slide?

So the world has changed since July last year, the summit of the BRICS countries in Fortaleza in Brazil. And this is a picture which was made at this occasion, showing the leaders of

Russia, India, Brazil, China and South Africa. And they

basically

concluded a new strategic alliance — economic alliance, which Prime Minister Modi characterized in the following way: He said.

"This is the first alliance of nations, which are not defined by

their current capacity, but by their future potential of development." And at another occasion, Modi said that the biggest

potential of India is, that 60% of its people are below 30 years

of age, and therefore, if they are well-educated and developed,

they can come to the help of other nations, which has demographic

problems, like Germany, for example.

What these countries did, is they concluded an enormous amount of economic treaties, of economic cooperation, including

peaceful development of inherently safe nuclear energy, the development of fusion energy, joint space projects, space travel,

and numerous other high-tech cooperation areas.

Then, the next day, they met with the leaders of South America, the organizations of CELAC [Community of Latin American

and Caribbean States] and Unasur [Union of South American Nations]. Then a little bit later they also had meetings with countries of ASEAN [Association of Southeast Asian Nations] and

actually you have now a completely parallel system of economics,

which is really going to be the infrastructure development of the

world.

Now this here is an official picture of the New Silk Road and the Maritime Silk Road, which shows you the old Silk Road

from Xi'an, actually it goes even farther to the west, Lianyungang, where the end of that Silk Road is on the China Sea,

all the way through Urumqi, then Central Asia into Europe; and then Maritime Silk Road is actually connecting even Africa and much of the Pacific also into Europe. And this is modelled on the

famous Maritime Silk Road of the 15th century, which connected the nations of the world already at that time.

Now, I want to very quickly say that this made us very happy, when Xi Jinping announced the New Silk Road in Kazakhstan

in 2013, we jumped that high — you know, in the Schiller Institute — because we had promoted this idea. This was our proposal when the Berlin Wall came down, in '89, and the wall no

longer was there. So we said let's connect Paris with Berlin and

Vienna, which is a triangular area of the size of Japan, and has

the highest concentration of industrial capacity in the world; and let's make corridors to Warsaw, to Kiev, to the Balkans. And

it would have been a perfect way to intervene.

Unfortunately at that time, despite the fact there was a very good resonance, you had Bush Sr., you had Margaret Thatcher, and they had completely different ideas: They wanted to

reduce Russia from a superpower to at Third World, raw materials-exporting country, and therefore they introduced the shock-therapy, instead, which dismantled the Russian industrial

potential between '91-'94, to only 30% left.

But then, when in '91, the Soviet Union collapsed, we connected this triangle, Paris-Berlin-Vienna, and we said: OK, now the Iron Curtain is gone, now we can have development corridors connecting the population and industrial centers of

Europe with those of Asia, through corridors. And then we looked

at the best geographical conditions. I should say, we were inspired very much by the railway program of Sun Yat-sen, the founder of modern China, who had developed a whole network of Chinese railways, and that went into this program. So, at that time we said let's look at the best geographical preconditions,

and we found, not so accidentally, that the old Trans-Siberian Railroad and the old Silk Road, the ancient Silk Road, had the best geographical conditions to build such infrastructure.

So at that point the shock therapy started to destroy Russia's economy, but we kept holding seminars — we had hundreds

of seminars, in Europe, in United States, and then, eventually,

in Warsaw, in Budapest, in Moscow. And in '96 even in Beijing, where the Chinese government had responded to our proposal to all

the governments, to hold a big conference promoting the regions

along the Silk Road. And I was there as a speaker, but then came

the Asia Crisis in '97, and China, at that conference said, that

this will be the long-term strategy for China until 2010. But then the Asia crisis brought chaos and then the Russian GKO crisis [in '98].

So in the mean time we kept working on this initial proposal which grew. And the latest of this, is this report: It's a 370-page study which is really the idea of connecting the world

through infrastructure corridors.

Now, here you see some of these projects, which are already being built, by the BRICS, by some of the other countries — for

example China is now building a transcontinental railroad from

Brazil to Peru, this is letter A [on the map]. This has already

started — you know, Latin America does not have an infrastructure network! It is still in the colonial condition, where you have little railroads from the iron ore mountain to the

coast, but if you want to travel from Peru to Brazil, you have to

go via Miami. So this is the idea, to develop a continental railroad system.

Then number 1 there is the canal built in Nicaragua, it will be the second Panama Canal, which obviously is an extremely important project, which will mean that Nicaragua has a very good

chance to become an industrial country, with improving living standards of its population. Naturally the Greenies are going crazy and they say there are two fishermen who have to be resettled. But, first of all, these people will be compensated,

and secondly without infrastructure, there is {no} industrial development; without infrastructure there is not even agriculture, because without infrastructure you cannot transport

and process food.

So then, naturally you have the Bering Strait, this number 2. This has been recently announced by Vladimir Yakunin, who is

the head of Russian Railways. And he proposed (I don't think I have that slide), a fast train connection from London all the way

through the Bering Strait to New York. A couple of years ago, Mr.

LaRouche and I participated in a conference in Moscow where the

fathers of the Bering Strait Project were present. These were all

older men over 80, and they said: "Oh, in 20 years, we can go

with a maglev train from Acapulco through the Bering Strait to Mumbai, and this will be much faster than you can go by ship today," and they had a very pioneering spirit.

So this is very important because this connection not only would connect the transport lines of North America with those of

Eurasia, but it would be absolutely crucial to open up the Arctic

Region. In the Far East of Russia you have all the raw materials

which are in the periodic table of Mendeleyev, and they represent

for the next 100 years a very important raw-material potential which will be important not only for Russia, but for Europe, for

the United States, for China, for Japan, for Korea. So this will

be the way to develop it, because these raw-material are in permafrost conditions, and you have to build, you have to build

cities, which have a dome, because people have to live — you cannot live in permanfrost conditions like that, you have to have

a special way of developing it.

Now, I could go into many other projects — the Seikan tunnel between the Japanese islands does already exist, it connects the two important islands in Japan. Then the Bohai Tunnel will connect two Chinese cities and shorten the transport.

The brown line there, this is the actual Silk Road [Silk Road Economic Belt], which is now being promoted by China; this larger

gray line is the [21st-Century] Maritime Silk Road; but as you can see, it stretches all the way to Europe and into Africa. Prime Minister Li Keqiang was several times last year in Africa,

and he proposed to connect all African capitals through a fast

train system. And I know from many Africans, leaders and leading

politicians, they are very happy about that, because Africa right

now urgently needs development. And I think, if you look at the

horrendous refugee crisis, the people drowning by the thousands

in the Mediterranean, it makes it {so} clear that to bring development to Africa is the only way how you can overcome this

unbelievable tragedy. And if Europe would have a right mind, they

would join! You know, rather than sending the Triton boats to chase the refugees back, which is a complete moral bankruptcy of

Europe.

Now this is very interesting, because the big question always comes, "who should finance all of this?" As you know, already at the Brazil Fortaleza summit, the BRICS countries agreed, together with some of the other countries, to create new

financial institutions: the New Development Bank of the BRICS, the AIIB [Asian Infrastructure Investment Bank] was already founded in last October, but also a whole set of other banks. And it came from the idea, that when the Asia crisis happened in

'97, in which speculators like George Soros speculated against the currencies of countries like Korea, Philippines, Thailand, in

one week up to 60-80% downward, and these countries had no defense; so they concluded, "OK, we have to protect ourselves,"

so they created the Contingency Reserve Arrangement [CRA], which

is a pool of currencies of a \$100 billion, which will defend all

of the participating countries against speculative attacks. Now, the AIIB, the New Development Bank, the New Silk Road Fund, the Maritime Silk Road Fund, the bank of the Shanghai Cooperation Organization [SCO Development Bank], and the SAARC [South Asian Association for Regional Cooperation] Development Fund, are all new banks which follow a completely different principle than Wall Street and the City of London, or Frankfurt,

for that matter. They say, we do not participate in speculation,

but we will use these funds only for investment in the real economy, into these projects. And this is urgently needed, because as you know, despite all of the quantitative easing of the Federal Reserve, and now [ECB President] Mr. Draghi, who are

printing money as if there would be no tomorrow, the money does

not arrive at the industries! Because the banks, the speculators

prefer to keep the casino going, and this is actually reaching a

point where at the IMF annual spring meeting which just took place in Washington, the IMF itself put out a report saying that

we are facing a collapse {bigger} than 2008 with the collapse of

Lehman Brothers. And several economists from J.P. Morgan and other banks warned that you could have a simultaneous stock and

bond crisis, causing a meltdown of the system; or, if the Federal

Reserve would increase the interest rate only by a tiny, tiny amount it could blow up the whole derivatives bubble of \$2 trillion. And if the Troika and the ECB are pushing Greece out of the Eurozone, that could also trigger a collapse, because it

would not so much hurt Greece, but it would blow up the

European

banks.

So therefore, the existence of these banks are de facto a lifeboat in the face of the immediate danger of a collapse. Now, as you probably have noticed, when the question came, who would be a founding member of the Asian Infrastructure Investment Bank, which was already constituted last October, but

the date until which countries could join as founding members was

end of March [2015]. And the United States put a lot of pressure

on the allies, not to join; they didn't want Korea to join; naturally, they didn't want Europe to join, and they put maximum

pressure on Asian countries not to join. But then, it just so happened, that the best ally of the United States, Great Britain,

was the first European country to join, and that caused a kind of

a dam break, and then Germany, France, Italy, Switzerland, Austria, and all the Scandinavian countries joined. And the actual founding members included 57 countries. And they basically participate in different degrees in this new bank, which obviously people realize that what China is offering with

the economic cooperation in these projects, is much, much more attractive than to participate in more speculative bubbles which

eventually will pop. So, this was from the founding meeting in October, already, but in the meantime, it become many more states.

Now, this is also very interesting, because this is a proposal which my husband made in 1975. It was called the International Development Bank, and it was basically the same idea as the AIIB, today, saying that the IMF and the World Bank

do not provide enough credit for Third World development. This was a proposal he made in '75, and it went into the final resolution of the Non-Aligned Movement in 1976 in Colombo, Sri Lanka, and it had the same idea as the AIIB.

The World Bank only spends per year \$24 billion for projects. But the actual requirement of the developing countries, is about \$8 trillion in the next years! So there is no way the World Bank can manage that, and this bank, on the other side, the AIIB, and the other banks will grow and will become more productive.

Now, this is very important because what the AIIB and the New Development Bank and this new economic system which is emerging represent, is something completely different than monetarism. Monetarism is the idea that you have to have maximum

profit, the real economy doesn't count; as a matter of fact,
you

all know, that if you have an industrial firm which lays of 10,000, the stock goes up! It doesn't make any sense. In the realm of monetarism, this is explained by the idea that the firm

becomes "more productive" because fewer workers work more, and therefore the profit is greater; but from the standpoint of the

real economy this makes no sense at all.

And it is exactly that philosophy which has caused the Troika to destroy Greece. What they managed to do is to reduce the Greek economy by one-third, to increase the youth unemployment to 65%, and people are extremely unhappy, not only

in Greece, but also in Italy, in Spain, Portugal and so forth. What we propose, both the IDB and these new banks, is really going back to a completely different model. It's based on the idea of this man, whom you all recognize, I'm sure — he is Alexander Hamilton, the first Secretary of the Treasury of the United States. And he created, actually, the United States, by creating the National Bank and the credit system, because,

what

he did, was after the War of Independence, the different states

in the United States were totally indebted. So he unified the United States by taking over the debt obligations of these states, and basically saying, it's no longer your business, we'll

take these debts as a Federal state, as a national state, and we

will transform that into a credit mechanism, only aimed at areal

production.

And that was really the actual founding of the United States. And this idea of a credit system which is not monetarism, but it is the idea that credit can only be given for

future production in the real economy, not for speculation, that

model was what made the United States a great industrial power.

Because, despite the fact that some following Presidents then tried to dismantle it, the United States went back to it, again

and again. It was the policies of John Quincy Adams; it was the

policy of Abraham Lincoln with the greenbacks; it was the policy

of Franklin D. Roosevelt. This is how Roosevelt brought the United States out of the Depression of the '30s by building the

Reconstruction Finance Corp. which financed the New Deal, and that's how America got out of the Depression. And, also, it was

the basis for the German Kreditanstalt für Wiederaufbau, the state bank, which help to finance the reconstruction and the economic miracle of Germany in the postwar period — which was modeled on the Reconstruction Finance Corp.

So this is therefore, not something new. It's a tested model, it has always been the basis when there was progress in the real economy, as compared to the financial markets. I'm not

talking about the financial markets, I'm talking about real production for the livelihood and the common good of the people.

So the first step there, we have called for — Tom mentioned it — that we think it is an absolute matter, actually

of war and peace, if we succeed to get the European nations {and}

America to join with this "win-win," all-inclusive, non-geopolitical system. And, as I said, the financial system of

Wall Street and the City of London {is} about to blow up, bigger

than 2008, and the only way how that can be avoided from leading

to a chaotic collapse, is by going back to the Glass-Steagall legislation which was introduced by Franklin D. Roosevelt in 1933, which was his answer to the collapse of '29-'33 period. And he separated the banks, by making the commercial banks separate from the investment banks, so that the investment bank

could not have access to assets of the commercial banks.

And this exist from 1933 until 1999 in the United States,
and in Europe you had practically the same thing, because you
had

a very regulated banking sector. But the Wall Street forces did

not like it, because naturally it reduced their profit, so they

worked very hard to eliminate it, which they were able to do in

1999, and the whole super-expansion of the speculative area only

occurred after this law was eliminated. And the good news, is that there is a right now a Presidential candidate in the United

States, who has said that his first act if he would move into the

White House, would be to reintroduce this Glass-Steagall law:

that is the former Maryland Gov. Martin O'Malley, about whom many

papers are writing that he has a very good chance to take the Democratic nomination, because many people think Hillary Clinton

has made too many compromises with bad policies, when she was Secretary of State. But, O'Malley is not alone, but you have a whole bunch of people around him, who say the United States must

go back to being a Republic; it must go back to putting the common good above the interests of Wall Street. And that is really the "to be or not to be" question of the whole world. Now, if this reorganization would take place, then, the United States could easily join with the BRICS countries in such

efforts as the AIIB and other such things. And, as you know, the

Greek government has also demanded that there is no way how they

can pay their debt, because as you know, of all the rescue packages which went to Greece, only 3% of that money remained in

Greece, while all the rest really went to the European banks. And therefore, to demand that Greece should pay back these debts,

it's just impossible! And the Greek government has made the point that they want to have a European Debt Conference, like Germany in 1953, without which the German economic miracle would

never have taken place. So if this all happens, and that could

happen in the short term, Europe could easily participate in that.

Now, I just want to say, the ancient Silk Road was not only an exchange of silk, and porcelain, and paper, printing, gunpowder, and many, many other goods, but much more important than that, it was an exchange of ideas and technologies: Silk making is more important than silk; how to print books is more important than the book. So the ancient Silk Road was an extremely important exchange of goods and culture, and ideas, and

understanding among people — and so will be the New Silk Road, just with modern means.

Now, if you go back to the picture, this is why we have said, "The New Silk Road Becomes the World Land-Bridge" where we

have the camels, sort of symbolizing the old Silk Road, and here

you see a maglev train, and here you see a rover on the Moon, to

give you an idea that the exchange of technologies and goods in

the modern world will be the most advanced technologies to the benefit of all of mankind.

So going back to the problem here, is, obviously, if you look at that map, you see, these are the deserts of the world:

very broad desert band which goes from the Atlantic coast of Africa, through the Sahara-Sahel zone, the Arab Peninsula, the Middle East, all the way to China. And that desert is growing. It's expanding. And then you have the desert in the West of the

United States, which is right now ruined by a big drought in California, in Texas, in all the states west of the Mississippi;

and naturally, Brazil has a drought.

In the United States this is very severe. Here you have a global water scarcity map; here you have the water stress

indicator. In the United States, just to mention that, Governor

Brown of California has just announced that the water consumption

will be cut by 25% up to 36%! Now that is the death to Californian agriculture; in the south of California, for example,

in the Central Valley, in this region, 40% of the entire agriculture of the United States is produced, and this is now being completely destroyed. Here you see, this is a former reservoir, which is almost dried up. This is the snowpack: in 2013, it was relatively, a lot of snow, and last year, no snow,

so the drought is expanding, and obviously, to cut consumption means you kill people. I mean, you cannot cut water — where should these people go? There are already cities and towns where

people are - it's not just not watering their lawn - it's
taking public showers, of getting water rations, and then
eventually people have to move away, because if there is no
water

there is no life. There were already herds being transformed, of

hundreds of thousands of head of cattle, and the idea to just accept that, and as Governor Brown said, "California historically

has only a carrying potential of 400,000 people," is ridiculous,

because there are presently 39 million people living in California! And the idea to say there's only room for 400,000 is

completely ahistorical about what is the role of human beings, who differentiate themselves from animals by being able to increase the living capability for more people by improving productivity, by transforming the industry, the infrastructure,

and in that way, developing the planet.

So obviously, China has taken a completely different approach. Here you see, China is actually the only country which

has taken a very big water diversification: There is on the one

side, the Three Gorges Dam, which is now producing, I think 22 gigawatts of electricity per year, and it has eliminated flooding

which killed many thousands of people in the past; and even more

important, is the water diversification project from the southern

area of the Yangtze River through a Northern Route into the Yellow River and the desert area of China; and the Middle Route

to the region around Beijing.

So this is actually a model which is now being followed by Narendra Modi for India, who just agreed to make gigantic water

projects to tame the water coming down from the Himalayas, and also making canals out of 101 Indian rivers.

Now, what most people don't consider is, that water is not a natural resource like iron ore, or gold, or whatever: You can't

use up, because water is organized in global cycles, where 90% of

the precipitation rains down over the ocean, only 10% rains down

over the land. And that water, the Sun causes evaporation, this

leads to cloud formation, and then the water rains down, and it

is human activity, which can make these cycles more efficient.

It's not just, that it rains down over land and then flows back

into the ocean. You can use it in agriculture, you can use it in

industrial production, you can use it in other urban activities,

and it is actually the ability of man to make that more efficient.

Here you see a very interesting comparison — you see here the water diversion of the United States. Even though the water

diversion of China has started much more recently, it's almost double, which shows you the completely different philosophy.

This is a very important project, which is part of the approach to fight the desert, and this is the Lake Chad Transagua

project, which is the idea, that you could eliminate a lot of the

drought in the Sahel zone and around Lake Chad by bringing some

of the surplus water from the headwaters region of the Congo

the one side, through rivers and canals into Lake Chad, which has

been reduced to less than 10% right now; and also through a second canal along the Nile to increase the agricultural land in

Africa tremendously. And also now to bring real development to these countries, without which you will have more people running

away from Boko Haram, which is now at Lake Chad and Nigeria. And

without a real development perspective, there is no way how you

can contain these projects.

Human beings are the only species, which can improve the conditions of mankind again and again and again, and the last 10,000 years, or 20,000 years since the last Ice Age, just think,

what an enormous development mankind has made. We have increased

the population potential of the Earth from about 5 million at most, to presently around 7 billion. This is due to the fact that

man, unlike animals, can make new discoveries, discovers the universal principles of our physical universe, and think things,

which have never been thought before.

Therefore, the attack on the water crisis is not just a question of using the aquifers, because the aquifers can — they

replenish, but this goes much too slowly. It's not only re-diverting the rivers, dams, but it's especially influencing the global cyclical process of water. There is a relationship between what happens in our Solar System and the rain. Because the Sun, which shines on the oceans, causes evaporation, but the

Sun is not the only solar impact on the weather; it's also the cosmic radiation, which comes from our galaxy, which leads to cloud formation, ionization of moisture, and therefore to rain.

That is not just something where we have to wait passively until

it happens, but we can study, for example, what is happening in

our galaxy, which influences the weather, and then understand better, how we can create more water.

Here, you see our Solar System in a 32 million year cycle, moving along the Milky Way. The Milky Way is basically a flat plateau, in which our Solar System is moving up and down in cycles, and you have a complete change in the weather patterns,

which comes from the position of our Solar System in our galaxy.

I'm not saying, that we know everything about that yet. We know, that there is a lot of connection between the Solar System,

the galaxy and the weather patterns on our Earth, and I can

assure you, that if you look at the long-term changes in our weather patterns, then {these} things are a lot more important,

than whatever you use in your little car as CO2 production. Because these are forces, which are of a completely different magnitude, and naturally, the climate is changing, but galactic

processes are really what is the cause of it.

Anyway, the idea of using cosmic rays and ionization of moisture is already successfully being done by Israel and by some

of the Gulf States; Russia is doing a lot of research on this, and this is, what we have to do. The reason, why I'm saying this,

is, the Silk Road is not just building railways from Dunhuang to

Lisbon or wherever; it's not just building roads, it's not just

building canals. The modern Silk Road, the New Silk Road is, exactly as the old Silk Road was, {an exchange of ideas, of technology, for the common good of all.}

Obviously, today the big challenges are world poverty, are the danger of war, are the danger of water scarcity, which could

become the reason for new wars. So the New Silk Road — and this

is what we understand with it, and I'm sure that our Chinese friend will show his perspective — but that is the philosophy, which we have taken as a basis in our approach, that the New Silk

Road is {a vision}, of how humanity can move away from geopolitics and the stupid idea that we have to fight over scarce

resources, that we have to create wars because we don't like another system, that we have to eventually self-destruct, but that we have to make the evolutionary jump to the idea of the common aims of mankind and to define the next phase of

evolution

in the interest of all.

If you look at this, the Deputy Prime Minister Dmitry Rogozin of Russia just two days ago, pointed to the fact, that the BRICS countries are all space travelling nations. China is the leader in space travel. When China in December 2013 landed the Yutu rover on the Moon, with was the idea, that in a few missions later, I think it was in 2017, this Yutu — "Jade Rabbit" — that they will bring back helium-3. Helium-3 is an isotope, which is actually a fuel for fusion power. It's much more efficient than deuterium or tritium, because with this heavy

deuterium and tritium in the fusion process, you are still using

turbines, and you use turbines to create electricity in the old

way. But with helium-3 you can directly gain electricity from the

physical process of fusion power, and therefore, naturally, the

energy efficiency is much, much higher. And once we have fusion

power, for example, this will create for the first time energy and raw materials security for the Earth. Energy security, because on the Moon, you have several tons of helium-3, which will be sufficient for many tens of thousands of years of energy

security on the Earth; and raw materials security, because with

the high heat of the plasma torch, you can take any waste, including nuclear waste, including waste in your household, and

turn it back into isotopes, which you then can reconstruct and make new raw materials.

So this is the vanguard of where mankind must go, and China has made that its national pride. And China, contrary to Germany,

which is very stupid with respect to energy — you know, this stupid exit from nuclear energy without having an alternative, is

completely crazy — but China has basically created a situation,

where they are in the right position to solve this problem, and

Rogozin, the Deputy Prime Minister of Russia, has said, that the

BRICS countries will cooperate in space to solve these problems.

So this is extremely important, because if mankind makes that jump to not have war as a conflict resolution, which in a time of nuclear energy, it should be obvious that we must move to

a different regime, that we must define the common aims of mankind, that which is, — if you have seen these pictures with astronauts and cosmonauts and taikonauts, they all report the same: When they are in space and look at our little planet, this

blue planet, they realize that there are no borders. They also realize that our planet is extremely small in a very big Solar System, in an even bigger galaxy, and there are {billions} of galaxies. So, there are dangers from space, like cosmic radiation, like asteroids; there are all kinds of dangers, which

we don't manage right now. But if we don't want to have the same

fate as the dinosaurs, who became eliminated 65 million years ago, because probably a meteorite hit the Earth and created so much cloud cover, that all the vegetation stopped, and then the

dinosaurs, and 96% of all other species were eliminated; if we as a creative species, {are} really the creative species, we should put our efforts together and defend against common dangers

to our planet, common dangers to our civilization, and unite.

And there is no better image for that than space collaboration.

This whole question also has a philosophical dimension.

Because people think, China is just doing an imperial expansion,

they want to have their interests. Well, I have the deepest conviction that what is working in China right now, especially with President Xi Jinping, {is} the 2,500-year-old Confucian tradition in China. And I go even so far to say the Chinese people have Confucius in their genes. Confucius was a philosopher, who reacted to a historical period in China, which

was characterized by war, by great unrest, by turmoil. And he developed the Confucian philosophy, which is beautiful. I can only advise you, in case you are not doing it, study Confucius.

Because Confucius has this idea that there must be harmony in the

world, on the planet. And that, for example, the best way to have harmony is, there is one key notion, which is {li}, which is

the idea, that each person, each nation, should take its proper

place, and develop in the best possible way, and then you have harmony. Because if everybody develops their creative potential

and their best maximum capacity, and takes the development of the

other as their own interest, and vice versa, then you have peace.

And that should also be based on the other notion of {ren}. {Ren} basically means the same thing as love, or {agapë}, or the

Christian idea of charity.

And it happens to be that these ideas are also in the European best tradition. There is a very important philosopher of

the 15th century, called Nicolaus of Cusa, who was the founder of

modern science, the founder of the modern nation-state, and he was very important: He broke through the barrier from the Middle

Ages to modern times. Because he was actually the person, who brought the Council of Florence into being by first finding handwritings in Byzantium, which were then the basis for the unification of the Orthodox Church with the Roman Church; but when he brought the Orthodox delegation in 1453 to the Council of

Florence, he had a stroke of genius: He said, now, I am thinking

something, which no human being has ever thought before. He then

wrote his {De Docta Ignorantia}, and he developed this notion of

the coincidence of opposites, the {coincidentia oppositorum}, which was the idea, that the One has a higher quality than the Many, and that the human mind is capable of synthesizing some hypothesis, which gives you a deeper insight into the laws of the

universe, into Classical art — in other words, it's the creativity of the human mind, which is the driving force in the

development of the universe. And that's for example, what the Russian philosopher Vladimir Vernadsky called, that the creativity of man is a geophysical force in the universe. Now, what he did basically, is to say — he didn't say it in this way,

but the effect of it was — that in order to move away from the Middle Ages, from the Scholasticism, from the Neo-Peripatetics and the Aristotelean ideas, you had to basically break with the

axioms of the Middle Ages thinking, and that you had to create something basically completely new, a new method of thinking. And I'm saying, that with the New Silk Road, we have to do

exactly that: We have to break away from money, greed, monetarism, all of these things, which really are a decaying culture. If you look at the European, American, Western culture,

it {is} a decaying culture. Just look at the youth culture. Look

at what our young people watch in terms of pop music, video games, the violence, just the popular entertainment has become really degenerate. And we have to break with that, and we have to

combine the New Silk Road economic model — which I did not go into so much today, because I already spoke about it two months

ago here in Copenhagen — but we have to break with the whole axiomatic of globalization and basically go for a New Renaissance, a new cultural renaissance of thinking, which will

build on the best traditions of each country: on Confucianism, on Vedic tradition of India, on Avicenna [Ibn Sina], and other thinkers, Al-Farabi, Abu Al-Kindi in the Arab world; in Europe,

the great Classical music tradition, the Italian Renaissance, the

German Classical music. We just have to take the high points of

all civilizations, and study that, and start to love the culture

of the other countries, and then we will create out of this a completely New Renaissance, which will bring mankind into a completely new phase of evolution.

Because I do not believe, that the present condition of mankind is, what we are here for! We are not here to kill each other; we are not here to eat caviar, until we have it coming out

of our ears. We are here to be creative! We are here to discover

the laws of the universe, to write beautiful poems, to write

beautiful music, to celebrate the creativity of civilization. And

I think, that the idea of man in space, man going into the next

phase of the evolution of man, is really what will get us out of

this crisis. So that is, what the New Silk Road is all about. [ovation]

## Video: Slutspil: Det monetære Imperiesystem. Dansk udskrift

## Slutspil: Det monetære Imperiesystem

Colin Lowry: » ... Kulturen. Grundlæggelsen af den amerikanske kultur, var baseret på ... folk, der kom for at grundlægge De forenede stater, ville lige fra begyndelsen skabe en republik, baseret på frihed, baseret på det enkelte menneskes identitet, værdien af deres eksistens, hvad de kan gøre, deres intellekt, og udvikling af samfundet. Det var den totale modsætning til det engelske samfund på den tid.«

Grundlæggerne af De forenede Staters Republik var bevidste om deres arv om at skabe en ny form for samfund, der var befriet fra et imperiesystems magt. Det var dette imperiesystems magt, der havde kontrolleret hele civilisationen i tusinder af år og var en større trussel mod amerikanerne under deres revolution end kanonerne, der pegede mod Boston havn.

Jeff Steinberg: »John Adams gennemførte en undersøgelse af

forfatningernes historie, der gik helt tilbage til Athen, og i denne undersøgelse, der blev cirkuleret blandt de delegerede ved Forfatningskonventionen, var der et helt afsnit om Venedig. Ikke alle enheder, der kalder sig republikker, er rent faktisk republikanske. Venedig var oligarkisk, det var en større koncentration af oligarkisk magt, end man ser i de fleste europæiske monarkiers historie.«

Et Imperiesystem repræsenteres ikke af et land eller en enkelt monark. Imperier har altid været baseret på et monetært systems magt.

John Hoefle: »Vi ser Dow Jones, den går op, den går ned … hver gang, vi gør noget, briterne ikke kan lide, kollapser Dow Jones, og hver gang, vi kapitulerer til briterne, går Dow Jones op. Det er en af de måder, de kontrollerer os på, og andre nationer på lignende måde. «

2.20»Vi har at gøre med Det britiske System, der har sin oprindelse i 1.000 års venetiansk monetarisme.«

Denne arv har i dag sin magtbase på De britiske Øer. Imperiet har måske skiftet, men det britisk-kontrolleret monetaristiske system udøver i princippet den samme, onde hensigt.

Lowry: »Mange ting, som englænderne selv siger, slipper ligesom 'katten ud af sækken'. At det gamle England er dødt. De kalder det endda selv de tre faser af Det britiske Imperium. Den første fase slutter i 1783. Den anden fase begynder, da Shelburne kommer til magten. Og den tredje fase begynder ved slutningen af Anden Verdenskrig. Og dér er de nu.«

## SLUTSPIL: Det monetære Imperiesystem

Året er 1780 i England. Den amerikanske Revolution er stadig i gang på den anden side Atlanten. Og de intelligente ser, at England har kurs mod et nederlag i Amerika. Den engelske hær er nu så desperat for at få værnepligtige til at kæmpe mod amerikanerne, at de beslutter at opgive de gamle love og åbenlyst tillade katolikker at gå ind i den britiske hær. En modreaktion dannes omkring et medlem af Overhuset for at få en protestantisk protestmarch mod Parlamentet imod Loven om katolsk undsætning af 1778. En hovedperson i denne operation var en betydningsfuld aktør i grupperingen af det Britiske Ostindiske Kompagni, ved navn Lord Shelburne.

## Den venetianske overtagelse af England

Gennem det Ostindiske Kompagnis netværk af spioner og aktører bestak Shelburne et andet medlem af Overhuset ved navn Lord Gordon til at rekruttere alle lediggængere i London og betale dem med whisky. Den 2. juni 1780 marcherede 50.000 mennesker til Parlamentsbygningerne for at fremlægge en appel. De fik også navnelister på ledende skikkelser i Parlamentet, der skulle tæves rent fysisk.

Jeff Steinberg: »Denne fordrukne pøbelflok under Lord Gordon belejrede bogstavelig talt det britiske Parlament, og det var Lord Shelburnes ansvar at beordre hjemmeværnet ud for at undertrykke opstanden. Han ventede i tre dage.«

Folkemængden plyndrede romersk-katolske kirker, katolikkers private hjem og angreb mange offentlige bygninger, inklusive Bank of England. Newgate-fængslet blev stukket i brand og brudt op, og mange af dets fanger blev sluppet fri. 450 mennesker blev dræbt eller såret, før hæren kunne genoprette orden. Premierminister North fra den traditionelle gruppe af 'gamle England' trådte rædselsslagen tilbage.

Jeff Steinberg: »På dette tidspunkt var Lord Shelburne en betydningsfuld person i det britiske oligarki, men han var slet ikke involveret i regeringen. Han var leder af det, der kaldtes det Britiske Ostindiske Kompagnis hemmelige komite. Det var en komite bestående af tre personer, der administrerede den overordnede politiske beslutningstagning for det Ostindiske Kompagni, der selvfølgelig havde sit eget, udstrakte imperium. Shelburne så med rædsel Lord Norths og den britiske regerings dumhed, så de besluttede, at de måtte vælte den britiske regering.«

I kølvandet på opstandene, der væltede Lord Norths regering, blev Shelburne britisk indenrigsminister og dernæst britisk premierminister i 1782, lige netop tidsnok til at kontrollere de amerikanske forhandlinger ved slutningen af Den amerikanske Revolution.

Men for at forstå, hvad det er, der nu kommer til magten med Shelburnes indtræden i regeringen, lad os kaste et tilbageblik til de tidlige 1760'ere. Det er begyndelsen af den proces, hvorved det Britiske Ostindiske Kompagni overtager den britiske regering. Efter Syvårskrigen, også kendt som den fransk-indianske krig i Nordamerika …

Steinberg: »På det tidspunkt voksede England frem som den førende imperiemagt i Europa og det repræsenteredes af det Ostindiske Kompagni, der blev blandet sammen med og udøvede dominans over den nominelt valgte engelske regering.«

## Syvårskrigen

Slaget ved Leuthen 1757.

General Edward Braddock 1695-1755.

## Kolnbergs fald 1761.

Englands kultur begyndte at skifte. Mændene fra det Ostindiske Kompagni, der havde kæmpet mod franskmændene i Indien, kom nu hjem. Mange var ikke Lords eller landadel, da de rejste, men da de kom hjem, var de så rige, at de bogstavelig talt kunne købe sæder i Parlamentet og vende det britiske, politiske

etablissement på hovedet.

Colin Lowry: »Dette er et kompagni, der minder meget om Haliburton eller Blackwater på den måde, at det er privat ejet, men udfører et angiveligt offentligt arbejde for Imperiet. Det havde en utrolig flåde, sin egen hær, sine egne penge, når det var hjemme i Indien, kontrollerede handlen med Kina hjem til England, kontrollerede handlen med de amerikanske kolonier, og kontrollerede selvfølgelig monopolet på the til Amerika og England. Disse mænd har heller ingen troskab mod Gamle England. De ser ikke Imperiet som centreret i England mere. De ser det som et globalt imperium, et financier-imperium. Med andre ord, så er de fuldstændig parat til at bygge skibe i Indien, med indiske slavearbejdere og lade Deptford skibsværftet i London næsten gå bankerot, fordi de bygger det så billigt, men de er faktisk ligeglade med det. De ser ikke på deres effekt på selve England, men er villige til at ruinere noget af den engelske økonomi til fordel for egen profit.«

En forfatningskrise brød ud i England 1768. Krisen kom til et opgør over spørgsmålet om, hvorvidt Ostindien, der havde sin egen hær, har ret til at erklære krig uden for kronens kontrol.

Lowry: »Svaret fra Ostindien var, ja, det havde de. Kronens svar var nej, det har I ikke. Dette var en enorm konflikt i England, åbenlyst, men også for det meste bag scenen.«

Statsgælden i England i 1768 var astronomisk pga. Syvårskrigen. Og man anså det for at være fordelagtigt for Kronen og Finansministeriet at bringe Ostindien ind på en let reguleret måde. I 1772 skabte Lord North Loven om regulering, hvilket er første gang, der er en fusion mellem Ostindien ind i regeringen. Loven krævede, at Handelsstyrelsen skulle udnævne 4 direktører for Ostindisk Kompagni, og at Ostindisk Kompagni skulle udnævne 4 medlemmer af regeringens handelsstyrelse. Dette er første gang, en forening med det

offentlige finder sted.

Lowry: »Dette er for amerikanerne, især Benjamin Franklin, et signal om, at Den amerikanske Revolution er den eneste vej frem, meget snart. For nu er denne financier-magt i færd med at overtage magten over engelsk politik. Der er ikke længere nogen adskillelse mellem, at amerikanerne er imod den ostindiske politik, men appellerer til Kronen om beskyttelse; disse to kræfter har nu indgået ægteskab gennem denne lov fra 1772. Det bliver meget værre i 1784.«

I 1770'erne i England havde der i den engelske befolkning eksisteret en meget stor, pro-amerikansk sektion, der var imod det, det Britiske Ostindiske Kompagni gjorde. Shelburne påbegyndte dannelsen af en struktur i England, der eliminerede enhver mulighed for engelske patrioter til at redde deres land. Det var et venetiansk oligarki, der nu overtog magten, og det var også dette oligarki, der nu befandt sig midt i fredsforhandlingerne ved slutningen af den amerikanske revolution.

Steinberg: »Shelburnes strategi var at få det til at se ud, som om han var Den amerikanske Revolutions bedste ven, at støtte principperne om frihed og alt det, som Den amerikanske Revolution repræsenterede. Men, på typisk venetiansk maner, så var hans virkelige strategi Del og Hersk.«

Lowry: »Han sidder i krydset mellem Franklin, amerikanerne, og så franskmændene og spanierne ved fredsforhandlingerne, og hans synspunkt er at opgive så lidt som muligt, især i Indien, og alt, hvad der kan have en effekt på Imperiet sådan, som han nu vil modellere det til at blive, som er et financierimperium og et imperium til udvinding af råmaterialer. Denne del er ikke noget nyt; men han er parat til grundlæggende set at give amerikanerne anerkendelse af uafhængighed, men holde så meget som muligt væk fra franskmændene i Indien.«

Den amerikanske Revolution var en global krig. Udover, at

franskmændene og briterne kæmpede i Nordamerika, kæmpede de også i Indien, og ud for Caribiens og Afrikas kyster. Under fredsforhandlingerne blev alle disse forskellige dele af konflikten forhandlet. Shelburne manøvrerede for at sikre, at briterne kunne føre separate forhandlinger med amerikanerne, franskmændene og spanierne, hvilket gav ham de bedste betingelser for at manipulere den ene op imod den anden og opsplitte den alliance, der netop havde slået Det britiske Imperium.

Med sæden til splittelse sået i Europa, var de primære midler, Shelburne havde for at kontrollere de tidligere amerikanske kolonier, frihandel. Shelburnes synspunkt var, at amerikanerne måtte inddæmmes til at være en begrænset kystnation, der ikke kunne bruge de udstrakte indlandsterritorier til udvikling. Skulle De forenede Stater lykkes med at blive en selvstændig nation, så kunne dette Britiske Imperium ikke overleve. Skulle Shelburne sikre denne nye form for Imperium over det britiske samfund, måtte han desuden også eliminere enhver lighed med en nation, der måtte være tilbage i England.

Lowry: »Så på dette tidspunkt vil han skabe en sammensmeltning mellem Ostindisk Kompagnis bestyrelse og en hemmelig komite, der skal styre det britiske Udenrigsministerium og Imperiets udenlandske dele, og dette kaldes Kontrolstyrelsen. Så i 1784 introducerer Shelburne, gennem Pitt, der nu er leder Underhuset, Loven for Indien af 1784, der officielt skaber Kontrolstyrelsen og forener Ostindisk Kompagnis hemmelige komite med britiske efterretningsfunktioner. 0 g inkluderer Udenrigsministeriet. Men dette gør også noget andet. Det skaber rent faktisk en struktur, hvor Kronen bliver kørt ud på et sidespor mht. til magt over politik. Briterne ville selv sige, at Georg III sandsynligvis er den sidste, sande monark med fuld magt. Over for de gamle, engelske Whigs og oppositionen fra 1760'erne, der stadig er der, signalerer dette, at de er færdige. Der kommer ingen modstand mod denne magt efter 1784. Det ville være nytteløst; denne magt styrer

nu England. Det gør den virkelig også, og dens mål er at smadre Amerika og alle andre rivaler, og selvfølgelig franskmændene og spanierne, der støttede Amerika, er deres mål, samt selvfølgelig selve Amerika.«

Denne magts førsteprioritet var at fuldføre den totale ødelæggelse af Frankrig, der var begyndt med Englands militære sejr under Syvårskrigen. Shelburne skulle nu tage de metoder i anvendelse, som han brugte til at vælte regeringen i England, denne gang med Frankrig som mål, og som skulle blive kendt som Den franske Revolution.

# SI-seminar i København den 27. april 2015: Kinas politik for "Et Bælte, En Vej" SI Copenhagen seminar, April 27, 2015: China's One Belt, One Road Policy

Stor succes for Københavner-seminar om Kinas politik for »Et Bælte, En Vej«

København, 27. april 2015 — Omkring 80 mennesker deltog i dag i et seminar, som blev holdt på Copenhagen Business Confucius Institute under Copenhagen Business School.

Følgende personer var talere på seminaret:

Velkomsttale: **Hr. Li Xiaoguang**, kinesisk meddirektør for Copenhagen Business Confucius Institute.

**HE hr. Liu Biwei**, Den kinesiske Folkerepubliks ambassadør til

Kongeriget Danmark – åbningstale.

Fr. Helga Zepp-LaRouche, grundlægger af og international præsident for Schiller Instituttet og en betydningsfuld medforfatter af »Den Nye Silkevej bliver til Verdenslandbroen«; mangeårig leder i LaRouche-bevægelsen og gift med den amerikanske statsmand, økonom og filosof Lyndon LaRouche; forkvinde for det tyske politiske parti Bürgerrechtsbewegung Solidarität (Borgerrettighedsbevægelsen Solidaritet), BüSo. Introduktion v/Tom Gillesberg, formand for Schiller Instituttet i Danmark.

**Hr. Liu Chunrong**, PhD., associeret professor, School of International Public Affairs, Fundan Universitetet; eksekutiv vicedirektør for Fundan-European Centre for China Studies, Københavns Universitet.

De ca. 80 deltagere inkluderede fem ambassadører samt diplomater fra seks andre ambassader, mange medlemmer og kontakter af Schiller Instituttet, og andre interesserede som har specielle tilknutning til Kina.

Denne konference er den tredje i rækken af 'Manhattanprojekt'-konferencer i København siden januar, som Schiller Instituttet har arrangeret. En mere udførlig rapport vil følge, inkl. links til video- og audiooptagelser.

## **English:**

# Very Successful Copenhagen Seminar on "China's 'One Belt, One Road' Policy"

The Schiller Institute in Denmark held a very successful seminar about China's "One Belt, One Road" policy, at the Copenhagen Business Confucius Institute, attended by approximately 80 people. Video and audio recordings can be found at: http://schillerinstitut.dk/si/?p=6387

**Li Xiaoguang**, the Chinese co-director of the Copenhagen Business Confucius Institute, welcomed the speakers and attendees.

The seminar participants had the honor to have opening remarks by **His Excellency Mr. Liu Biwei**, Ambassador of the People's Republic of China to the Kingdom of Denmark.

The next speaker was **Helga Zepp-LaRouche**, founder and president of The Schiller Institute, and a major author of the EIR Report "The New Silk Road Becomes the World Land-Bridge." She was introduced by **Tom Gillesberg**, chairman of The Schiller Institute in Denmark. Mrs. Zepp-LaRouche presented the world land-bridge policy and the new BRICS paradigm, as the alternative to the danger of economic and financial collapse, and nuclear war. One area of special emphasis was the growing crisis of fresh water scarcity, counterposing the lack of action in the U.S., with the great infrastructure project approach in China.

The Chinese point of view of the "One Belt, One Road" policy was presented by **Dr. Liu Chunrong**, PhD, Associate Professor, School of International Relations and Public Affairs, Fudan University, and Executive Vice Director Fudan-European Centre for China Studies, NIAS, University of Copenhagen.

Among the audience were: five ambassadors, plus diplomats from another six other embassies; people who have a special connection to China representing a Danish think tank, academia and businesses; plus many Schiller Institute members and contacts.

This seminar was the third in a series of Manhattan projectstyle Schiller Institute conferences held in Copenhagen since January.

English transcript of Helga Zepp-LaRouche's speech, and Tom

### Gillesberg's introduction:

HELGA ZEPP-LAROUCHE ADDRESSES "CHINA'S 'ONE BELT, ONE ROAD' POLICY' SEMINAR IN COPENHAGEN, April 27, 2015

Here is the transcript of Helga Zepp-LaRouche's address to the Schiller Institute seminar in Copenhagen, which was held Copenhagen Business Confucius Institute, Copenhagen Business School. Click her for the audio and video from Helga Zepp-LaRouche's speech and the other speeches from the seminar.

TOM GILLESBERG: I have the great honor of introducing Helga Zepp-LaRouche, who has come here from a rather busy schedule both

in Germany and the United States, but also the whole world she's

intervening to. Just as a short introduction, Mrs. Zepp-LaRouche

has been since 1977 the wife and very close collaborator of Lyndon LaRouche in the United States, the economist, philosopher,

statesman who is giving leadership in the U.S., for the U.S. to

return to the intentions of its founders, to be a promoter of sovereign nations that can collaborate on an equal footing to secure the benefits for all nations and peoples.

And Helga has a very, I think, close connection to China. As a young journalist she traveled to China in 1971, in the height of the Cultural Revolution as one of the first Western journalists and actually saw on the spot what was going on. She

then became politically active with the LaRouche movement and embarked on a life-long battle for a new just world economic order, for the possibilities of development for all nations and

peoples.

She then founded, among many other things, the Schiller Institute, in 1984. She is presently the chairwoman of the

German political party, the BüSo — the Bürgerrechtsbewegung Solidarität, or Civil Rights Soliarity Movement. She was vry active after the Fall of the Berlin Wall and one of the authors

of the Schiller Institute program for the development of the world after the Iron Curtain had fallen of the program the Paris-Berlin-Vienna Productive Triangle, a Locomotive for the World Economy. And when that did not materialize, she was very active in extending that program to the program for the Eurasian

Land-Bridge, going from China and Asia to Europe and having a development of the whole region. And as part of that, she then became a visitor many times to China to speak on the need for a

New Silk Road and actually earned her nickname in China as the "Silk Road Lady," for her efforts to have China embark on this policy.

And since then, she has been also the driving force in holding many scores of conferences in Europe and the United States on the need for creating a paradigm shift, to get the Western world out of its long-term economic, strategic, and cultural crisis. And, over the last couple of years, she has been one of the architects of this report, "The New Silk Road Becomes the World Land-Bridge." She has also been leading the campaign to stop the present geopolitical games that threaten to

detonate thermonuclear war and instead get the United States and

Europe to accept the offer of the BRICS countries to join forces

in an inclusive world order, where all nations of the world, on

an equal footing, collaborate to secure the peace and development

of all nations.

So I think it's very appropriate that you are here to directly lay what's going on, so please, welcome. [applause]

HELGA ZEPP-LAROUCHE: Thank you, Tom, for these kind words of introduction.

Well I have a certain dilemma, because I want to present to you the potential, which lies in this program, and given the fact

that the Western media have reported very little about it, I have

a dilemma, that I need to tell you, that this is {the} most important political initiative on the planet right now. The dilemma comes from the fact that, by introducing this idea, have

to tell you immediately why this is the case, and that is the reality, that the world is much more close to a new global war,

than most people have an inkling of. And this New Silk Road initiative, which comes from China, but which in the meantime has

been joined by many countries, is the only available war-avoidance policy.

Now there was just on the April 18- 19 in Moscow the Fourth Moscow International Security Conference, and the main subject of

this conference was the danger of nuclear war. And this is a reaction to the fact that NATO has been expanding eastward, up to

the borders of Russia. You have a whole bunch of strategic doctrines which Russia regards as a threat to their security interests, and naturally you have the horrendous situation in Ukraine, which contrary to what the Western media have been reporting on — or not reporting actually — is it's really something which the West must make up. I just participated in the

last two days, or Friday and Saturday in a conference in Baden-Baden in Germany, the German-Russian Cultural Days. It's an

annual conference, and there was a large gathering of German industrialists and Russian speakers and Russian people. And we

had the fortune to have a videoconference connected to this conference, which brought in a live program from the former Prime

Minister of Ukraine, Mr. [Mykola] Azarov. And he gave an absolutely hair-raising report about the conditions in Ukraine,

the fact that the country is being torn apart. Political leaders

are either forced to go into exile or are threatened to be assassinated; journalists are being killed openly in the street;

trenches are being built; and, as you know, American soldiers are

now training the National Guard, which has a lot of Nazi components in it. And for the Russians this is extremely severe,

because we are shortly before the 70th anniversary of the end of

Nazism and the end of the Second World War, and the mood of the

people were really horrified to see this endorsement of Nazis 70

years after the Second World War.

Now, I don't want to go into this in depth, we can do that in the discussion if people have questions about it, but I think

this crisis, in Ukraine in particular, I could also point to the

Middle East, which is in a similar horrible condition, makes very, very clear, that if we as humanity cannot move away from geopolitics — geopolitics was the reason for two world wars in the 20th century, and right now the continuation of geopolitics

is threatening a new global war. I just want to mention an article in {New York Times} from 19th April, where two generals,

Gen. James Cartwright, who is former head of the U.S.

#### Strategic

Command, and Gen. Vladimir Dvorkin, who is the chief of intelligence of the Russian Strategic Nuclear Forces, they penned

together an article, In which they said that the world has never

been so close to the danger of nuclear war globally, and therefore extinction, as right now. And the reason is obviously

that even the normal code of behavior among nations, which existed in the Cold War, that you had a red telephone between Kennedy and Khrushchev, this no longer exists; and you have the

two nuclear forces, from NATO and the West and Russia, all the time on launch on warning. And launch on warning means there are

only a few minutes time, if one side perceives a launch, either

by intention or by accident, they have a few minutes, actually it's estimated three minutes' time, to respond or be eliminated.

So that shows you how extremely close we are to the danger of a global extinction of civilization. Because if this would happen, we would not exist as humanity. And I'm saying it with that gravity, to say that this calls all the more urgently, for a

different approach. And the different approach must be to move away from geopolitics and move in the direction of the common aims of mankind.

And it just happens to be, that the policies which are proposed by President Xi Jinping, which he calls a "win-win" policy, is exactly that. It's the idea, that with the New Silk Road, you have a policy where every country which participates in

it, will have a benefit for it. The New Silk Road, Maritime Silk

Road policy by China is {not} a new imperial policy replacing

the

Anglo-American imperial policy, but it is a completely new model

of the nations among nations, where the enormous example of the

Chinese economic miracle, which China was able to develop in the

last 30 years — you know, where China in {30 years}, developed as much as most industrial nations needed 100 or 200 years to develop — and China is now offering to export that model and have other countries benefit in a similar way from that kind of

economic miracle, which China did.

Can you move to the first slide?

So the world has changed since July last year, the summit of the BRICS countries in Fortaleza in Brazil. And this is a picture which was made at this occasion, showing the leaders of

Russia, India, Brazil, China and South Africa. And they basically

concluded a new strategic alliance — economic alliance, which Prime Minister Modi characterized in the following way: He said,

"This is the first alliance of nations, which are not defined by

their current capacity, but by their future potential of development." And at another occasion, Modi said that the biggest

potential of India is, that 60% of its people are below 30 years

of age, and therefore, if they are well-educated and developed,

they can come to the help of other nations, which has demographic

problems, like Germany, for example.

What these countries did, is they concluded an enormous amount of economic treaties, of economic cooperation,

#### including

peaceful development of inherently safe nuclear energy, the development of fusion energy, joint space projects, space travel,

and numerous other high-tech cooperation areas.

Then, the next day, they met with the leaders of South America, the organizations of CELAC [Community of Latin American

and Caribbean States] and Unasur [Union of South American Nations]. Then a little bit later they also had meetings with countries of ASEAN [Association of Southeast Asian Nations] and

actually you have now a completely parallel system of economics,

which is really going to be the infrastructure development of the

world.

Now this here is an official picture of the New Silk Road and the Maritime Silk Road, which shows you the old Silk Road from Xi'an, actually it goes even farther to the west, Lianyungang, where the end of that Silk Road is on the China Sea,

all the way through Urumqi, then Central Asia into Europe; and then Maritime Silk Road is actually connecting even Africa and much of the Pacific also into Europe. And this is modelled on the

famous Maritime Silk Road of the 15th century, which connected the nations of the world already at that time.

Now, I want to very quickly say that this made us very happy, when Xi Jinping announced the New Silk Road in Kazakhstan

in 2013, we jumped that high — you know, in the Schiller Institute — because we had promoted this idea. This was our proposal when the Berlin Wall came down, in '89, and the wall no

longer was there. So we said let's connect Paris with Berlin and

Vienna, which is a triangular area of the size of Japan, and has

the highest concentration of industrial capacity in the world; and let's make corridors to Warsaw, to Kiev, to the Balkans. And

it would have been a perfect way to intervene.

Unfortunately at that time, despite the fact there was a very good resonance, you had Bush Sr., you had Margaret Thatcher, and they had completely different ideas: They wanted to

reduce Russia from a superpower to at Third World, raw materials-exporting country, and therefore they introduced the shock-therapy, instead, which dismantled the Russian industrial

potential between '91-'94, to only 30% left.

But then, when in '91, the Soviet Union collapsed, we connected this triangle, Paris-Berlin-Vienna, and we said: OK, now the Iron Curtain is gone, now we can have development corridors connecting the population and industrial centers of Europe with those of Asia, through corridors. And then we looked

at the best geographical conditions. I should say, we were inspired very much by the railway program of Sun Yat-sen, the founder of modern China, who had developed a whole network of Chinese railways, and that went into this program. So, at that time we said let's look at the best geographical preconditions,

and we found, not so accidentally, that the old Trans-Siberian Railroad and the old Silk Road, the ancient Silk Road, had the best geographical conditions to build such infrastructure.

So at that point the shock therapy started to destroy Russia's economy, but we kept holding seminars — we had hundreds

of seminars, in Europe, in United States, and then, eventually,

in Warsaw, in Budapest, in Moscow. And in '96 even in Beijing, where the Chinese government had responded to our proposal to

all

the governments, to hold a big conference promoting the regions

along the Silk Road. And I was there as a speaker, but then came

the Asia Crisis in '97, and China, at that conference said, that

this will be the long-term strategy for China until 2010. But then the Asia crisis brought chaos and then the Russian GKO crisis [in '98].

So in the mean time we kept working on this initial proposal which grew. And the latest of this, is this report: It's a 370-page study which is really the idea of connecting the world

through infrastructure corridors.

Now, here you see some of these projects, which are already being built, by the BRICS, by some of the other countries — for

example China is now building a transcontinental railroad from Brazil to Peru, this is letter A [on the map]. This has already

started — you know, Latin America does not have an infrastructure network! It is still in the colonial condition, where you have little railroads from the iron ore mountain to the

coast, but if you want to travel from Peru to Brazil, you have to

go via Miami. So this is the idea, to develop a continental railroad system.

Then number 1 there is the canal built in Nicaragua, it will be the second Panama Canal, which obviously is an extremely important project, which will mean that Nicaragua has a very good

chance to become an industrial country, with improving living standards of its population. Naturally the Greenies are going crazy and they say there are two fishermen who have to be resettled. But, first of all, these people will be compensated,

and secondly without infrastructure, there is {no} industrial development; without infrastructure there is not even agriculture, because without infrastructure you cannot transport

and process food.

So then, naturally you have the Bering Strait, this number

2. This has been recently announced by Vladimir Yakunin, who is

the head of Russian Railways. And he proposed (I don't think I have that slide), a fast train connection from London all the way

through the Bering Strait to New York. A couple of years ago, Mr.

LaRouche and I participated in a conference in Moscow where the

fathers of the Bering Strait Project were present. These were all

older men over 80, and they said: "Oh, in 20 years, we can go with a maglev train from Acapulco through the Bering Strait to Mumbai, and this will be much faster than you can go by ship today," and they had a very pioneering spirit.

So this is very important because this connection not only would connect the transport lines of North America with those of

Eurasia, but it would be absolutely crucial to open up the Arctic

Region. In the Far East of Russia you have all the raw materials

which are in the periodic table of Mendeleyev, and they represent

for the next 100 years a very important raw-material potential which will be important not only for Russia, but for Europe, for

the United States, for China, for Japan, for Korea. So this will

be the way to develop it, because these raw-material are in

permafrost conditions, and you have to build, you have to build

cities, which have a dome, because people have to live — you cannot live in permanfrost conditions like that, you have to have

a special way of developing it.

Now, I could go into many other projects — the Seikan tunnel between the Japanese islands does already exist, it connects the two important islands in Japan. Then the Bohai Tunnel will connect two Chinese cities and shorten the transport.

The brown line there, this is the actual Silk Road [Silk Road Economic Belt], which is now being promoted by China; this larger

gray line is the [21st-Century] Maritime Silk Road; but as you can see, it stretches all the way to Europe and into Africa. Prime Minister Li Keqiang was several times last year in Africa.

and he proposed to connect all African capitals through a fast train system. And I know from many Africans, leaders and leading

politicians, they are very happy about that, because Africa right

now urgently needs development. And I think, if you look at the

horrendous refugee crisis, the people drowning by the thousands

in the Mediterranean, it makes it {so} clear that to bring development to Africa is the only way how you can overcome this

unbelievable tragedy. And if Europe would have a right mind, they

would join! You know, rather than sending the Triton boats to chase the refugees back, which is a complete moral bankruptcy of

Europe.

Now this is very interesting, because the big question

always comes, "who should finance all of this?" As you know, already at the Brazil Fortaleza summit, the BRICS countries agreed, together with some of the other countries, to create new

financial institutions: the New Development Bank of the BRICS, the AIIB [Asian Infrastructure Investment Bank] was already founded in last October, but also a whole set of other banks. And it came from the idea, that when the Asia crisis happened in

'97, in which speculators like George Soros speculated against the currencies of countries like Korea, Philippines, Thailand, in

one week up to 60-80% downward, and these countries had no defense; so they concluded, "OK, we have to protect ourselves,"

so they created the Contingency Reserve Arrangement [CRA], which

is a pool of currencies of a \$100 billion, which will defend all

of the participating countries against speculative attacks. Now, the AIIB, the New Development Bank, the New Silk Road Fund, the Maritime Silk Road Fund, the bank of the Shanghai Cooperation Organization [SCO Development Bank], and the SAARC [South Asian Association for Regional Cooperation] Development Fund, are all new banks which follow a completely different principle than Wall Street and the City of London, or Frankfurt,

for that matter. They say, we do not participate in speculation,

but we will use these funds only for investment in the real economy, into these projects. And this is urgently needed, because as you know, despite all of the quantitative easing of the Federal Reserve, and now [ECB President] Mr. Draghi, who are

printing money as if there would be no tomorrow, the money does

not arrive at the industries! Because the banks, the

speculators

prefer to keep the casino going, and this is actually reaching a

point where at the IMF annual spring meeting which just took place in Washington, the IMF itself put out a report saying that

we are facing a collapse {bigger} than 2008 with the collapse of

Lehman Brothers. And several economists from J.P. Morgan and other banks warned that you could have a simultaneous stock and

bond crisis, causing a meltdown of the system; or, if the Federal

Reserve would increase the interest rate only by a tiny, tiny amount it could blow up the whole derivatives bubble of \$2 trillion. And if the Troika and the ECB are pushing Greece out of the Eurozone, that could also trigger a collapse, because it

would not so much hurt Greece, but it would blow up the European

banks.

So therefore, the existence of these banks are de facto a lifeboat in the face of the immediate danger of a collapse. Now, as you probably have noticed, when the question came, who would be a founding member of the Asian Infrastructure Investment Bank, which was already constituted last October, but

the date until which countries could join as founding members was

end of March [2015]. And the United States put a lot of pressure

on the allies, not to join; they didn't want Korea to join; naturally, they didn't want Europe to join, and they put maximum

pressure on Asian countries not to join. But then, it just so happened, that the best ally of the United States, Great Britain,

was the first European country to join, and that caused a kind of

a dam break, and then Germany, France, Italy, Switzerland, Austria, and all the Scandinavian countries joined. And the actual founding members included 57 countries. And they basically participate in different degrees in this new bank, which obviously people realize that what China is offering with

the economic cooperation in these projects, is much, much more attractive than to participate in more speculative bubbles which

eventually will pop. So, this was from the founding meeting in October, already, but in the meantime, it become many more states.

Now, this is also very interesting, because this is a proposal which my husband made in 1975. It was called the International Development Bank, and it was basically the same idea as the AIIB, today, saying that the IMF and the World Bank

do not provide enough credit for Third World development. This was a proposal he made in '75, and it went into the final resolution of the Non-Aligned Movement in 1976 in Colombo, Sri Lanka, and it had the same idea as the AIIB.

The World Bank only spends per year \$24 billion for projects. But the actual requirement of the developing countries, is about \$8 trillion in the next years! So there is no way the World Bank can manage that, and this bank, on the other side, the AIIB, and the other banks will grow and will become more productive.

Now, this is very important because what the AIIB and the New Development Bank and this new economic system which is emerging represent, is something completely different than monetarism. Monetarism is the idea that you have to have maximum

profit, the real economy doesn't count; as a matter of fact,
you

all know, that if you have an industrial firm which lays of

10,000, the stock goes up! It doesn't make any sense. In the realm of monetarism, this is explained by the idea that the firm

becomes "more productive" because fewer workers work more, and therefore the profit is greater; but from the standpoint of the

real economy this makes no sense at all.

And it is exactly that philosophy which has caused the Troika to destroy Greece. What they managed to do is to reduce the Greek economy by one-third, to increase the youth unemployment to 65%, and people are extremely unhappy, not only

in Greece, but also in Italy, in Spain, Portugal and so forth. What we propose, both the IDB and these new banks, is really going back to a completely different model. It's based on the idea of this man, whom you all recognize, I'm sure — he is Alexander Hamilton, the first Secretary of the Treasury of the United States. And he created, actually, the United States, by creating the National Bank and the credit system, because, what

he did, was after the War of Independence, the different states

in the United States were totally indebted. So he unified the United States by taking over the debt obligations of these states, and basically saying, it's no longer your business, we'll

take these debts as a Federal state, as a national state, and we

will transform that into a credit mechanism, only aimed at areal

production.

And that was really the actual founding of the United States. And this idea of a credit system which is not monetarism, but it is the idea that credit can only be given for

future production in the real economy, not for speculation, that

model was what made the United States a great industrial power.

Because, despite the fact that some following Presidents then tried to dismantle it, the United States went back to it, again

and again. It was the policies of John Quincy Adams; it was the

policy of Abraham Lincoln with the greenbacks; it was the policy

of Franklin D. Roosevelt. This is how Roosevelt brought the United States out of the Depression of the '30s by building the

Reconstruction Finance Corp. which financed the New Deal, and that's how America got out of the Depression. And, also, it was

the basis for the German Kreditanstalt für Wiederaufbau, the state bank, which help to finance the reconstruction and the economic miracle of Germany in the postwar period — which was modeled on the Reconstruction Finance Corp.

So this is therefore, not something new. It's a tested model, it has always been the basis when there was progress in the real economy, as compared to the financial markets. I'm not

talking about the financial markets, I'm talking about real production for the livelihood and the common good of the people.

So the first step there, we have called for — Tom mentioned it — that we think it is an absolute matter, actually

of war and peace, if we succeed to get the European nations {and}

America to join with this "win-win," all-inclusive, non-geopolitical system. And, as I said, the financial system of

Wall Street and the City of London {is} about to blow up, bigger

than 2008, and the only way how that can be avoided from

### leading

to a chaotic collapse, is by going back to the Glass-Steagall legislation which was introduced by Franklin D. Roosevelt in 1933, which was his answer to the collapse of '29-'33 period. And he separated the banks, by making the commercial banks separate from the investment banks, so that the investment bank

could not have access to assets of the commercial banks. And this exist from 1933 until 1999 in the United States, and in Europe you had practically the same thing, because you had

a very regulated banking sector. But the Wall Street forces did

not like it, because naturally it reduced their profit, so they

worked very hard to eliminate it, which they were able to do in

1999, and the whole super-expansion of the speculative area only

occurred after this law was eliminated. And the good news, is that there is a right now a Presidential candidate in the United

States, who has said that his first act if he would move into the

White House, would be to reintroduce this Glass-Steagall law: And

that is the former Maryland Gov. Martin O'Malley, about whom many

papers are writing that he has a very good chance to take the Democratic nomination, because many people think Hillary Clinton

has made too many compromises with bad policies, when she was Secretary of State. But, O'Malley is not alone, but you have a whole bunch of people around him, who say the United States must

go back to being a Republic; it must go back to putting the common good above the interests of Wall Street. And that is

really the "to be or not to be" question of the whole world.

Now, if this reorganization would take place, then, the

United States could easily join with the BRICS countries in such

efforts as the AIIB and other such things. And, as you know, the

Greek government has also demanded that there is no way how they

can pay their debt, because as you know, of all the rescue packages which went to Greece, only 3% of that money remained in

Greece, while all the rest really went to the European banks. And therefore, to demand that Greece should pay back these debts,

it's just impossible! And the Greek government has made the point that they want to have a European Debt Conference, like Germany in 1953, without which the German economic miracle would

never have taken place. So if this all happens, and that could happen in the short term, Europe could easily participate in that.

Now, I just want to say, the ancient Silk Road was not only an exchange of silk, and porcelain, and paper, printing, gunpowder, and many, many other goods, but much more important than that, it was an exchange of ideas and technologies: Silk making is more important than silk; how to print books is more important than the book. So the ancient Silk Road was an extremely important exchange of goods and culture, and ideas, and

understanding among people — and so will be the New Silk Road, just with modern means.

Now, if you go back to the picture, this is why we have said, "The New Silk Road Becomes the World Land-Bridge" where we

have the camels, sort of symbolizing the old Silk Road, and here

you see a maglev train, and here you see a rover on the Moon,

to

give you an idea that the exchange of technologies and goods in

the modern world will be the most advanced technologies to the benefit of all of mankind.

So going back to the problem here, is, obviously, if you look at that map, you see, these are the deserts of the world:  $\ensuremath{\Delta}$ 

very broad desert band which goes from the Atlantic coast of Africa, through the Sahara-Sahel zone, the Arab Peninsula, the Middle East, all the way to China. And that desert is growing. It's expanding. And then you have the desert in the West of the

United States, which is right now ruined by a big drought in California, in Texas, in all the states west of the Mississippi;

and naturally, Brazil has a drought.

In the United States this is very severe. Here you have a global water scarcity map; here you have the water stress indicator. In the United States, just to mention that, Governor

Brown of California has just announced that the water consumption

will be cut by 25% up to 36%! Now that is the death to Californian agriculture; in the south of California, for example,

in the Central Valley, in this region, 40% of the entire agriculture of the United States is produced, and this is now being completely destroyed. Here you see, this is a former reservoir, which is almost dried up. This is the snowpack: in 2013, it was relatively, a lot of snow, and last year, no snow,

so the drought is expanding, and obviously, to cut consumption means you kill people. I mean, you cannot cut water — where should these people go? There are already cities and towns where

people are — it's not just not watering their lawn — it's

taking public showers, of getting water rations, and then eventually people have to move away, because if there is no water

there is no life. There were already herds being transformed, of

hundreds of thousands of head of cattle, and the idea to just accept that, and as Governor Brown said, "California historically

has only a carrying potential of 400,000 people," is ridiculous,

because there are presently 39 million people living in California! And the idea to say there's only room for 400,000 is

completely ahistorical about what is the role of human beings, who differentiate themselves from animals by being able to increase the living capability for more people by improving productivity, by transforming the industry, the infrastructure,

and in that way, developing the planet.

So obviously, China has taken a completely different approach. Here you see, China is actually the only country which

has taken a very big water diversification: There is on the one

side, the Three Gorges Dam, which is now producing, I think 22 gigawatts of electricity per year, and it has eliminated flooding

which killed many thousands of people in the past; and even more

important, is the water diversification project from the southern

area of the Yangtze River through a Northern Route into the Yellow River and the desert area of China; and the Middle Route

to the region around Beijing.

So this is actually a model which is now being followed by Narendra Modi for India, who just agreed to make gigantic

water

projects to tame the water coming down from the Himalayas, and also making canals out of 101 Indian rivers.

Now, what most people don't consider is, that water is not a natural resource like iron ore, or gold, or whatever: You can't

use up, because water is organized in global cycles, where 90% of

the precipitation rains down over the ocean, only 10% rains down

over the land. And that water, the Sun causes evaporation, this

leads to cloud formation, and then the water rains down, and it

is human activity, which can make these cycles more efficient. It's not just, that it rains down over land and then flows back

into the ocean. You can use it in agriculture, you can use it in

industrial production, you can use it in other urban activities,

and it is actually the ability of man to make that more efficient.

Here you see a very interesting comparison — you see here the water diversion of the United States. Even though the water

diversion of China has started much more recently, it's almost double, which shows you the completely different philosophy.

This is a very important project, which is part of the approach to fight the desert, and this is the Lake Chad Transaqua

project, which is the idea, that you could eliminate a lot of the

drought in the Sahel zone and around Lake Chad by bringing some

of the surplus water from the headwaters region of the Congo on the one side, through rivers and canals into Lake Chad, which has

been reduced to less than 10% right now; and also through a second canal along the Nile to increase the agricultural land in

Africa tremendously. And also now to bring real development to these countries, without which you will have more people running

away from Boko Haram, which is now at Lake Chad and Nigeria. And

without a real development perspective, there is no way how you

can contain these projects.

Human beings are the only species, which can improve the conditions of mankind again and again and again, and the last 10,000 years, or 20,000 years since the last Ice Age, just think,

what an enormous development mankind has made. We have increased

the population potential of the Earth from about 5 million at most, to presently around 7 billion. This is due to the fact that

man, unlike animals, can make new discoveries, discovers the universal principles of our physical universe, and think things,

which have never been thought before.

Therefore, the attack on the water crisis is not just a question of using the aquifers, because the aquifers can — they

replenish, but this goes much too slowly. It's not only re-diverting the rivers, dams, but it's especially influencing the global cyclical process of water. There is a relationship between what happens in our Solar System and the rain. Because the Sun, which shines on the oceans, causes evaporation, but the

Sun is not the only solar impact on the weather; it's also the cosmic radiation, which comes from our galaxy, which leads to

cloud formation, ionization of moisture, and therefore to rain.

That is not just something where we have to wait passively until

it happens, but we can study, for example, what is happening in

our galaxy, which influences the weather, and then understand better, how we can create more water.

Here, you see our Solar System in a 32 million year cycle, moving along the Milky Way. The Milky Way is basically a flat plateau, in which our Solar System is moving up and down in cycles, and you have a complete change in the weather patterns,

which comes from the position of our Solar System in our galaxy.

I'm not saying, that we know everything about that yet. We know, that there is a lot of connection between the Solar System,

the galaxy and the weather patterns on our Earth, and I can assure you, that if you look at the long-term changes in our weather patterns, then {these} things are a lot more important,

than whatever you use in your little car as CO2 production. Because these are forces, which are of a completely different magnitude, and naturally, the climate is changing, but galactic

processes are really what is the cause of it.

Anyway, the idea of using cosmic rays and ionization of moisture is already successfully being done by Israel and by some

of the Gulf States; Russia is doing a lot of research on this, and this is, what we have to do. The reason, why I'm saying this,

is, the Silk Road is not just building railways from Dunhuang to

Lisbon or wherever; it's not just building roads, it's not just

building canals. The modern Silk Road, the New Silk Road is, exactly as the old Silk Road was, {an exchange of ideas, of technology, for the common good of all.}

Obviously, today the big challenges are world poverty, are the danger of war, are the danger of water scarcity, which could

become the reason for new wars. So the New Silk Road — and this

is what we understand with it, and I'm sure that our Chinese friend will show his perspective — but that is the philosophy, which we have taken as a basis in our approach, that the New Silk

Road is {a vision}, of how humanity can move away from geopolitics and the stupid idea that we have to fight over scarce

resources, that we have to create wars because we don't like another system, that we have to eventually self-destruct, but that we have to make the evolutionary jump to the idea of the common aims of mankind and to define the next phase of evolution

in the interest of all.

If you look at this, the Deputy Prime Minister Dmitry Rogozin of Russia just two days ago, pointed to the fact, that the BRICS countries are all space travelling nations. China is the leader in space travel. When China in December 2013 landed the Yutu rover on the Moon, with was the idea, that in a few missions later, I think it was in 2017, this Yutu — "Jade Rabbit" — that they will bring back helium-3. Helium-3 is an isotope, which is actually a fuel for fusion power. It's much more efficient than deuterium or tritium, because with this heavy

deuterium and tritium in the fusion process, you are still using

turbines, and you use turbines to create electricity in the old

way. But with helium-3 you can directly gain electricity from the

physical process of fusion power, and therefore, naturally, the

energy efficiency is much, much higher. And once we have fusion

power, for example, this will create for the first time energy and raw materials security for the Earth. Energy security, because on the Moon, you have several tons of helium-3, which will be sufficient for many tens of thousands of years of energy

security on the Earth; and raw materials security, because with

the high heat of the plasma torch, you can take any waste, including nuclear waste, including waste in your household, and

turn it back into isotopes, which you then can reconstruct and make new raw materials.

So this is the vanguard of where mankind must go, and China has made that its national pride. And China, contrary to Germany,

which is very stupid with respect to energy — you know, this stupid exit from nuclear energy without having an alternative, is

completely crazy - but China has basically created a situation,

where they are in the right position to solve this problem, and

Rogozin, the Deputy Prime Minister of Russia, has said, that the

BRICS countries will cooperate in space to solve these problems.

So this is extremely important, because if mankind makes that jump to not have war as a conflict resolution, which in a time of nuclear energy, it should be obvious that we must move to

a different regime, that we must define the common aims of mankind, that which is, — if you have seen these pictures with astronauts and cosmonauts and taikonauts, they all report the

same: When they are in space and look at our little planet, this

blue planet, they realize that there are no borders. They also realize that our planet is extremely small in a very big Solar System, in an even bigger galaxy, and there are {billions} of galaxies. So, there are dangers from space, like cosmic radiation, like asteroids; there are all kinds of dangers, which

we don't manage right now. But if we don't want to have the same

fate as the dinosaurs, who became eliminated 65 million years ago, because probably a meteorite hit the Earth and created so much cloud cover, that all the vegetation stopped, and then the

dinosaurs, and 96% of all other species were eliminated; if we as a creative species, {are} really the creative species, we should put our efforts together and defend against common dangers

to our planet, common dangers to our civilization, and unite.

And there is no better image for that than space collaboration.

This whole question also has a philosophical dimension.

Because people think, China is just doing an imperial expansion,

they want to have their interests. Well, I have the deepest conviction that what is working in China right now, especially with President Xi Jinping, {is} the 2,500-year-old Confucian tradition in China. And I go even so far to say the Chinese people have Confucius in their genes. Confucius was a philosopher, who reacted to a historical period in China, which

was characterized by war, by great unrest, by turmoil. And he developed the Confucian philosophy, which is beautiful. I can only advise you, in case you are not doing it, study Confucius.

Because Confucius has this idea that there must be harmony in the

world, on the planet. And that, for example, the best way to have harmony is, there is one key notion, which is {li}, which is

the idea, that each person, each nation, should take its proper

place, and develop in the best possible way, and then you have harmony. Because if everybody develops their creative potential

and their best maximum capacity, and takes the development of the

other as their own interest, and vice versa, then you have peace.

And that should also be based on the other notion of {ren}. {Ren} basically means the same thing as love, or {agapë}, or the

Christian idea of charity.

And it happens to be that these ideas are also in the European best tradition. There is a very important philosopher of

the 15th century, called Nicolaus of Cusa, who was the founder of

modern science, the founder of the modern nation-state, and he was very important: He broke through the barrier from the Middle

Ages to modern times. Because he was actually the person, who brought the Council of Florence into being by first finding handwritings in Byzantium, which were then the basis for the unification of the Orthodox Church with the Roman Church; but when he brought the Orthodox delegation in 1453 to the Council of

Florence, he had a stroke of genius: He said, now, I am thinking

something, which no human being has ever thought before. He then

wrote his {De Docta Ignorantia}, and he developed this notion of

the coincidence of opposites, the {coincidentia oppositorum},

which was the idea, that the One has a higher quality than the Many, and that the human mind is capable of synthesizing some hypothesis, which gives you a deeper insight into the laws of the

universe, into Classical art — in other words, it's the creativity of the human mind, which is the driving force in the

development of the universe. And that's for example, what the Russian philosopher Vladimir Vernadsky called, that the creativity of man is a geophysical force in the universe. Now, what he did basically, is to say — he didn't say it in this way,

but the effect of it was — that in order to move away from the Middle Ages, from the Scholasticism, from the Neo-Peripatetics and the Aristotelean ideas, you had to basically break with the

axioms of the Middle Ages thinking, and that you had to create something basically completely new, a new method of thinking. And I'm saying, that with the New Silk Road, we have to do exactly that: We have to break away from money, greed, monetarism, all of these things, which really are a decaying culture. If you look at the European, American, Western culture,

it {is} a decaying culture. Just look at the youth culture. Look

at what our young people watch in terms of pop music, video games, the violence, just the popular entertainment has become really degenerate. And we have to break with that, and we have to

combine the New Silk Road economic model — which I did not go into so much today, because I already spoke about it two months

ago here in Copenhagen — but we have to break with the whole axiomatic of globalization and basically go for a New Renaissance, a new cultural renaissance of thinking, which will

build on the best traditions of each country: on Confucianism,

on Vedic tradition of India, on Avicenna [Ibn Sina], and other thinkers, Al-Farabi, Abu Al-Kindi in the Arab world; in Europe,

the great Classical music tradition, the Italian Renaissance, the

German Classical music. We just have to take the high points of

all civilizations, and study that, and start to love the culture

of the other countries, and then we will create out of this a completely New Renaissance, which will bring mankind into a completely new phase of evolution.

Because I do not believe, that the present condition of mankind is, what we are here for! We are not here to kill each other; we are not here to eat caviar, until we have it coming out

of our ears. We are here to be creative! We are here to discover

the laws of the universe, to write beautiful poems, to write beautiful music, to celebrate the creativity of civilization. And

I think, that the idea of man in space, man going into the next

phase of the evolution of man, is really what will get us out of

this crisis. So that is, what the New Silk Road is all about. [ovation]

## Indisk senioranalytiker: BRIKS kan lede verden med nye initiativer

Onsdag, 1. april, 2015 — »BRIKS har opnået en hel del på sin korte levetid«, sagde Nandan Unnikrishnan, vicepræsident og seniormedlem af lærerstaben ved Observer Research Foundation i et interview med Ruslands Radio Sputnik i går. »De har ledet initiativerne for reformeringen af globale finansinstitutioner som IMF og Verdensbanken. Hvad vigtigere er, så har de skabt en ny institution — BRIKS' Nye Udviklingsbank, såvel som Valutareservefonden CRA. Dette er intet mindre end en spektakulær præstation, taget i betragtning, at det er første gang, sådanne arrangementer skabes i de sidste 200 år, uden de vestlige magters deltagelse. Et sådant initiativ må styrkes.«

Observer Research Foundation, der, sammen med Instituttet for Forsvarsstudier og -analyser (IDSA), har hjemme i New Delhi, er vokset frem som betydningsfulde, indiske tænketanke, der beskæftiger sig med spørgsmål om sikkerhed og udenrigspolitik.

Som svar på et spørgsmål om sit syn på Shanghai Samarbejdsorganisationens (SCO) forventede rolle, genbekræftede Unnikrishnan New Delhis syn på sikring af sikkerhed og stabilitet i nabolaget, så vel som i regionen som helhed. Indien, sammen med Pakistan og måske også Iran, forventes at blive fuldgyldigt medlem i år. Indien har i øjeblikket observatørstatus i SCO, ligesom også Iran og Pakistan har det.

»Indien er meget ivrig efter at adressere spørgsmålene om stabilitet og udvikling i sit umiddelbare og udvidede nabolag«, sagde Unnikrishnan. »SCO er en institution, der kan være med til at opfylde disse mål.«

# Obama ydmyget: Vestlige nationer tilslutter sig AIIB — Et lille 'Pearl Harbor' for Obama

Paris, Nouvelle Solidarité, 25. mrs. 2015 — Le Figaro bragte en højst interessant leder, dateret 20. mrs., om implikationerne af, at fire store europæiske nationer tilslutter sig den Asiatiske Infrastruktur-Investeringsbank, AIIB, på trods af USA's forsøg på at standse dem. Alt imens visse elementer i artiklen ikke er korrekte mht. de kinesiske hensigter, så rammer artiklen plet mht. det jordskælv, det repræsenterer over for Obamas politik.

»Aldrig er forræderiet så stort, som når det begås af ens

venner. Med beslutningen om at tilslutte sig AIIB, kastede Storbritannien en sten i dammen, der lavede krusninger ... For præsident Obama, der gjorde Det asiatiske Stillehavsområde til omdrejningspunktet for sin politik, svarer dette til en krigserklæring. Set fra Det Hvide Hus er AIIB en Beijingmanøvre for at svække amerikansk indflydelse og forstærke sin egen, regionale overhøjhed. Den kendsgerning, historisk, amerikansk allieret, medlem af G7 og NATOgrundpille har besluttet at tilslutte sig denne rivaliserende klub, er et slag i ansigtet … først og fremmest, fordi det understreger fremvæksten af yuan som en reservevekselvaluta. Og også, fordi det forårsagede en implosion af den vestlige blok: Opmuntret af briternes frimodighed var Australien og Sydkorea, der oprindeligt var de første til at misbillige initiativet, de første til at erklære deres potentielle interesse, der i denne uge blev efterfulgt af Italien, Tyskland og Frankrig! Endnu andre har stillet sig op i køen. Et lille Pearl Harbor for Washington.«

Den 24. marts blev den samme diskussion ført i bedste morgensendetid på BFM Radio, Frankrigs førende business-kanal, på en meget fremtrædende måde. BFM Radio rapporterede om spørgsmålene, og bemærkede så USA's modstand mod de allieredes tilslutning. »Og hvad så«, sagde hovedkommentatoren Stéphane svage, finansielle Soumier. »Frankrig har, med sine kapaciteter, ikke råd til at afvise sådanne muligheder.« Dækningen inkluderede et interview med en indisk ekspert, der sagde, at problemet med Verdensbanken og den Asiatiske Udviklingsbank (ADB) er, at de kun finansierer små og vækstprojekter. ۷i bæredygtige har infrastrukturprojekter og atomkraft, der skal udvikles, sagde han og tilføjede, at Indien er lykkelig over at have en bank, der kan betjene landets behov.

Den anden begivenhed, der skaber krusninger på vandet her i Frankrig, er de fremskredne forhandlinger mellem det franske oliekompagni Total, det russiske Novatek og CNPC [China National Petroleum Corporation] om en 15 mia. dollar stor investering i Yamal LNG [Liquified Natural Gas]-projektet i Sibirien. Målet er at have investeringen på plads inden årets udgang.

Wall Street er urolig over projektet iflg. dækningen i Wall Street Journal, der bemærker, at Totals direktør Patrick Pouyanné tog jobbet efter at »Totals forrige chef, Christophe de Margerie, blev dræbt i et flystyrt i Rusland. Ligesom hr. de Margerie byder hr. Pouyanné investeringer inden for politisk risikable områder velkommen«, skriver Wall Street Journal ildevarslende, »for mange af hans konkurrenter har også satset stort på Rusland og befinder sig nu i en knibe.«

### Diplomatseminar i København om BRIKS/Verdenslandbroen en

#### succes

København, 30. jan. 2015 — Helga Zepp-LaRouche var taler ved et seminar for diplomater, der blev afholdt i Det russiske Kulturcenter i København i dag, med titlen, »Økonomisk udvikling og samarbejde mellem nationer, eller økonomisk kollaps, krig og terror? Den Nye Silkevej bliver til Verdenslandbroen«.

Efter fr. LaRouches kraftfulde tale, talte repræsentanter fra tre af ambassaderne fra BRIKS-nationerne — Rusland, Kina og Sydafrika. Desuden stillede repræsentanten for Brasilien et spørgsmål under den efterfølgende diskussion.

Videoerne og lydfilerne af fr. LaRouches tale, og den tale, som hr. Machiel Renier van Niekerk, repræsentanten fra Sydafrikas ambassade i Danmark, holdt, kan høres på http://schillerinstitut.dk/si/?p=4818

I seminaret deltog repræsentanter fra 14 ambassader fra Europa, Asien, Afrika og Sydamerika, sammen med nogle danske erhvervsfolk og Schiller Instituttets aktivister.

Fr. LaRouche indledte sin tale med udviklingen i Grækenland, og hvordan landet kan blive et forbindelsesled mellem Europa og BRIKS. Hun talte om, hvor tæt vi er på en total nedsmeltning af finanssystemet, hvor tæt vi er på en atomkrig, og hvad forbindelsen mellem de to er. Hun understregede, at den fare, der repræsenteres af skiftet i USA's strategi for atomkrig, til en førsteangrebsdoktrin, sammen med afbrydelsen af kommunikationen mellem USA og Rusland, der rent faktisk var intakt under den cubanske missilkrise, betyder, at vi er tættere på atomkrig i dag, end nogen sinde før. Ja, der er et alternativ: Hvis vi får Europa og USA til at acceptere Xi Jinpings tilbud om at gå med i deres økonomiske alliance for udvikling.

Fr. LaRouche fremlagde det momentum, der er for BRIKS'

økonomiske udvikling, og det perspektiv, der er skitseret i den nye EIR-rapport »Den Nye Silkevej er blevet til Verdenslandbroen«, som hendes mand Lyndon LaRouche og hun selv, så vel som Schiller Instituttet, har kæmpet for i årtier.

Hun appellerede til deltagerne om at sætte dette alternativ på verdensdagsordenen ved at cirkulere idéerne i vores nye rapport gennem at arrangere interviews, kommentarer, kontakte folk fra erhvervslivet, der ville få gavn af Verdenslandbroen, cirkulere vores resolution og generelt ved at arbejde sammen med os i fremtiden.

Kontakt venligst EIR og Schiller Instituttet for at få rapporten »Den Nye Silkeveje er blevet til Verdenslandbroen« og brochuren »Hvorfor USA og Europa må gå med i BRIKS – En ny, international orden for menneskeheden« og andet materiale, og for deltagelse i fremtidige møder.

# Copenhagen diplomatic seminar with Helga Zepp LaRouche: The New Silk Road Becomes the World Land Bridge

We discovered that Mr. Van Niekerk's speech was cut off before its completion in the first video. The full version is in the second video.

See below for the texts of the speeches by a diplomat from the Embassy of China, and Mr. Van Niekerk from the Embassy of South Africa, and the slides Mrs. LaRouche used in her presentation.
