Will the Omicron COVID variant be the warning bell we heed?

Eight months ago, in March 2021, epidemiologists, virologists and infectious disease specialists from twenty-eight nations warned of the dangers to come without a full international vaccination roll-out. Most believed that we had a year or less before truly dangerous mutations proliferated widely. Gregg Gonsalves, Associate Professor of Epidemiology at Yale University eight months ago put it this way: "With millions of people around the world infected with this virus, new mutations arise every day. Sometimes they find a niche that makes them more fit than their predecessors. These lucky variants could transmit more efficiently and potentially evade immune responses to previous strains. Unless we vaccinate the world, we leave the playing field open to more and more mutations, which could churn out variants that could evade our current vaccines ...The virus doesn't respect borders and new variants somewhere on the planet mean none of us are safe."

But vaccinations alone will not stop COVID. Only full modern health systems everywhere, which require the simultaneous

rapid build-out of electricity production and delivery, the provision of clean water—new water systems, and all other required infrastructure, to support the hospitals, the clinics and the ongoing health concerns of people can do the job.

Only if we develop a full international, in-depth response to the escalation warnings from epidemiologists, virologists and infection disease specialists as advocated by the Schiller Institute beginning in March 2020, and repeated by former U.S. Surgeon General, Dr. Joycelyn Elders just a few days ago, can we stop the growing death, economic despair and that has wrecked so many human lives.

Join us in this conference, and recruit others to join the mission.

Baggrund:

Omicron: Urgent Need for a Modern Health System in Every Nation

Nov. 30: Helga Zepp-LaRouche has now urged the movement associated with her, in every nation where it is active and has outreach, to focus on the necessity to catalyze the construction of a modern system of hospital, healthcare, and research facilities *in every nation*, as a defense of the human race and the planet against pandemics. Taking the worldwide spread and capabilities of pandemic viruses seriously, has been postponed and played with for long enough in the COVID case—possibly too long.

Truly worldwide vaccination, which is urgent, is only one step back from the brink.

Already 21 months ago, on March 13, 2020, Helga LaRouche wrote

an editorial statement for the Schiller Institute in *EIR*, "COVID-19 Pandemic Forces Re-Thinking: International Cooperation Indispensable!," with an accompanying fact sheet "Urgent Physical-Economic Requirements To Fight the Pandemic." She wrote then: "If we want to prevent the coronavirus pandemic from spreading in waves and migrating from the Northern to the Southern Hemisphere and back— thus potentially creating the breeding grounds for additional similar and worse viruses—we must initiate radical changes.

"Hospitals with isolation wards must be built throughout the world, following the example of the city of Wuhan and Hubei Province, which built a total of 14 temporary hospitals, including the necessary intensive care beds. World Health Organization standards must be observed in doing so. China, for example, built facilities with 16,000 new hospital beds in just one month.

"International scientific research centers must be established for research on the COVID-19 virus and other viral and bacterial pathogens. Vaccines must be developed and tested. The results of research in biophysics, nuclear biology and space medicine must be made available immediately to all nations. The point of reference for this is the conception of a Strategic Defense of Earth (SDE) developed by Lyndon LaRouche, in which the protection of human life from pandemics is one focal point."

A great mobilization was needed then, and now: 10 million new hospital beds worldwide in 30,000 new hospitals and clinical centers; new laboratory facilities; 200 new gigawatts of reliable baseload electric power which is essential to such capacities; a tremendous years-long recruitment, including among youth, of 9-10 million physicians and assistants, nurses, engineers, laboratory technicians.

"These worldwide measures," Zepp-LaRouche wrote, "require investments that cannot be made under the conditions of the

present, collapsing financial system. The current actions of the central banks in injecting liquidity into this financial system by the trillions of dollars, and even the allocation of budget funds by governments, is due to a hyperinflationary monetary explosion, and is unsustainable.”

Therefore, she concluded, the “four economic laws” proposed by her husband Lyndon LaRouche were needed for this international construction, beginning with Glass-Steagall bank reorganization and introduction of Hamiltonian national banking.

Read Helga’s statement [here](#).

Now former U.S. Surgeon General Joycelyn Elders, in an open letter Nov. 23, days before the Omicron variant of the COVID virus was identified, “called upon virologists and medical experts throughout the globe to undertake an international, coordinated and integrated educational campaign to establish a sane approach to deal with this and potentially future pandemics.” Dr. Elders was in 2020 the co-founder with Helga LaRouche of the Committee on the Coincidence of Opposites, which has cooperative contacts with physicians and nurses organizations and with medical educators. She asks for a mobilization of ideas, as Helga LaRouche did in March 2020, on these questions (på dansk):

- Hvad er en pandemi?
- Hvordan bekæmpes en pandemi?
- Hvad er offentlig sundhed og hvordan bør vi arbejde sammen for at gennemføre anvendte og allerede testede, fundamentale sundhedstiltag, herunder hygiejne, rent drikkevand og næringsrig mad, og en forsyning af forebyggende og lindrende medicin, inklusive vacciner, som er afgørende for at overvinde pandemien?
- Hvad er den sammenlignede virkningsgrad af de forskellige vacciner og andre tiltag, som nu bruges i forskellige nationer og regioner, for at forhindre

alvorlig sygdom og død?

- Hvordan sikrer vi tilstrækkelige antal af sygehuse, sundhedsklinikker og sundhedspersonale i hver nation, herunder den systematiske rekruttering af unge, lokale sundhedsmedarbejdere for at hjælpe nu, med at bringe pandemien under kontrol?
